### HEALTH DATA IN THE INFORMATION AGE

#### USE, DISCLOSURE, AND PRIVACY

[National Academies Press](#) Regional health care databases are being established around the country with the goal of providing timely and useful information to policymakers, physicians, and patients. But their emergence is raising important and sometimes controversial questions about the collection, quality, and appropriate use of health care data. Based on experience with databases now in operation and in development, *Health Data in the Information Age* provides a clear set of guidelines and principles for exploiting the potential benefits of aggregated health data without jeopardizing confidentiality. A panel of experts identifies characteristics of emerging health database organizations (HDOs). The committee explores how HDOs can maintain the quality of their data, what policies and practices they should adopt, how they can prepare for linkages with computer-based patient records, and how diverse groups from researchers to health care administrators might use aggregated data. *Health Data in the Information Age* offers frank analysis and guidelines that will be invaluable to anyone interested in the operation of health care databases.

#### BIOETHICS, MEDICINE AND THE CRIMINAL LAW: VOLUME 2

#### MEDICINE, CRIME AND SOCIETY

[Cambridge University Press](#) In recent years, debates have arisen concerning the encroachment of the criminal process in regulating fatal medical error, the implementation of the Corporate Manslaughter and Corporate Homicide Act 2007 and the recent release of the Director of Public Prosecution's assisted suicide policy. Consequently, questions have been raised regarding the extent to which such intervention helps, or if it in fact hinders, the sustained development of medical practice. In this collection, Danielle Griffiths and Andrew Sanders explore the operation of the criminal process in healthcare in the UK as well as in other jurisdictions, including the USA, Australia, New Zealand, France and the Netherlands. Using evidence from previous cases alongside empirical data, each essay engages the reader with the debate surrounding what the appropriate role of the criminal process in healthcare should be and aims to clarify and shape policy and legislation in this under-researched area.

#### BEYOND THE HIPAA PRIVACY RULE

#### ENHANCING PRIVACY, IMPROVING HEALTH THROUGH RESEARCH

[National Academies Press](#) In the realm of health care, privacy protections are needed to preserve patients' dignity and prevent possible harms. Ten years ago, to address these concerns as well as set guidelines for ethical health research, Congress called for a set of federal standards now known as the HIPAA Privacy Rule. In its 2009 report, *Beyond the HIPAA Privacy Rule: Enhancing Privacy, Improving Health Through Research*, the Institute of Medicine's Committee on Health Research and the Privacy of Health Information concludes that the HIPAA Privacy Rule does not protect privacy as well as it should, and that it impedes important health research.

## REPORT OF THE MID STAFFORDSHIRE NHS FOUNDATION TRUST PUBLIC INQUIRY

---

### EXECUTIVE SUMMARY

**The Stationery Office** This public inquiry report into serious failings in healthcare that took place at the Mid Staffordshire NHS Foundation Trust builds on the first independent report published in February 2010 (ISBN 9780102964394). It further examines the suffering of patients caused by failures by the Trust: there was a failure to listen to its patients and staff or ensure correction of deficiencies. There was also a failure to tackle the insidious negative culture involving poor standards and a disengagement from managerial and leadership responsibilities. These failures are in part a consequence of allowing a focus on reaching national access targets, achieving financial balance and seeking foundation trust status at the cost of delivering acceptable care standards. Further, the checks and balances that operate within the NHS system should have prevented the serious systemic failure that developed at Mid Staffs. The system failed in its primary duty to protect patients and maintain confidence in the healthcare system. This report identifies numerous warning signs that could and should have alerted the system to problems developing at the Trust. It also sets out 290 recommendations grouped around: (i) putting the patient first; (ii) developing a set of fundamental standards, easily understood and accepted by patients; (iii) providing professionally endorsed and evidence-based means of compliance of standards that are understood and adopted by staff; (iv) ensuring openness, transparency and candour throughout system; (v) policing of these standards by the healthcare regulator; (vi) making all those who provide care for patients, properly accountable; (vii) enhancing recruitment, education, training and support of all key contributors to the provision of healthcare; (viii) developing and sharing ever improving means of measuring and understanding the performance of individual professionals, teams, units and provider organisations for the patients, the public, and other stakeholders.

## CASE STUDIES IN PHARMACY ETHICS

---

**Oxford University Press** Pharmacists face ethical choices constantly -- sometimes dramatic life-and-death decisions, but more often subtle, less conspicuous choices that are nonetheless important. Among the topics confronted are assisted suicide, conscientious refusal, pain management, equitable distribution of drug resources within institutions and managed care plans, confidentiality, and alternative and non-traditional therapies. Veatch and Haddad's book, first published in 1999, was the first collection of case studies based on the real experiences of practicing pharmacists, for use as a teaching tool for pharmacy students. The second edition accounts for the many changes in pharmacy since 1999, including assisted suicide in Oregon, the purchasing of less expensive drugs from Canada, and the influence of managed care on prescriptions. The presentation of some cases is shortened, most are revised and updated, and two new chapters have been added. The first new chapter presents a new model for analyzing cases, while the second focuses on the ethics of new drug distribution systems, for example hospitals where pharmacists are forced to choose drugs based on cost-effectiveness, and internet based pharmacies.

## PROTECTING ELECTRONIC HEALTH INFORMATION

---

**National Academies Press** When you visit the doctor, information about you may be recorded in an office computer. Your tests may be sent to a laboratory or consulting physician. Relevant information may be transmitted to your health insurer or pharmacy. Your data may be collected by the state government or by an organization that accredits health care or studies medical costs. By making information more readily available to those who need it, greater use of computerized health information can help improve the quality of health care and reduce its costs. Yet health care organizations must find ways to ensure that electronic health information is not improperly divulged. Patient privacy has been an issue since the oath of Hippocrates first called on physicians to "keep silence" on patient matters, and with highly sensitive data--genetic information, HIV test results, psychiatric records--entering patient records, concerns over privacy and security are growing. For the Record responds to the health care industry's need for greater guidance in protecting health information that increasingly flows through the national information infrastructure--from patient to provider, payer, analyst, employer, government agency, medical product manufacturer, and beyond. This book makes practical detailed recommendations for technical and organizational solutions and national-level initiatives. For the Record describes two major types of privacy and security concerns that stem from the availability of health information in electronic form: the increased potential for inappropriate release of information held by individual organizations (whether by those with access to computerized records or those who break into them) and systemic concerns derived from open and widespread sharing of data among various parties. The committee reports on the technological and organizational aspects of security management, including basic principles of security; the effectiveness of technologies for user authentication, access control, and encryption; obstacles and incentives in the adoption of new technologies; and mechanisms for training, monitoring, and enforcement. For the Record reviews the growing interest in electronic medical records; the increasing value of health information to providers, payers, researchers, and administrators; and the current legal and regulatory environment for protecting health data. This information is of immediate interest to policymakers, health policy researchers, patient advocates, professionals in health data management, and other stakeholders.

### HEALTH PROFESSIONS EDUCATION

### A BRIDGE TO QUALITY

**National Academies Press** The Institute of Medicine study Crossing the Quality Chasm (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. Health Professions Education: A Bridge to Quality is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.

**TOWARDS A MORALLY ACCEPTABLE PUBLIC POLICY FOR HIV TESTING OF PREGNANT WOMEN AND NEWBORNS**

---

Oxford University Press, USA The proliferation of Acquired Immune Deficiency Syndrome (AIDS) among women and children represents one of the gravest health issues confronting contemporary society. Women, most of childbearing age, now constitute 11 percent of all cases, and the U.S. Public Health Service has projected over 3,000 cases of pediatric AIDS by the end of 1991. In the face of these sobering statistics, experts have been called upon to grapple with a difficult, compelling question: under what conditions, if any, should HIV testing of women and children be required? Also at issue are the surreptitious testing for HIV antibodies as part of routine prenatal and neonatal examinations, and whether such testing should be performed on all women and infants, or only those who belong to groups judged at "high risk". In this unique contribution to the debate about HIV screening and testing, Ruth Faden, Madison Powers, and Gail Geller have assembled perspectives from experts in public health, medicine, law, and ethics. Their wide-ranging treatment examines the history of prenatal and neonatal screening programs; informed consent; legal issues and confidentiality; reproductive decision-making; and numerous other aspects of HIV testing. Alternative policy options for both now and the future are discussed in detail. This volume provides a comprehensive analysis of these pressing medical, public health, legal, ethical, and social issues, and is essential reading for AIDS researchers and clinicians, public health specialists, ethicists, health policymakers and analysts, obstetricians, and pediatricians.
