Strengthening Forensic Science in the United States

A Path Forward

National Academies Press Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. **Strengthening Forensic Science in the United States: A Path Forward** provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. **Strengthening Forensic Science in the United States** gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

The Genetic Lottery

Why DNA Matters for Social Equality

Princeton University Press A provocative and timely case for how the science of genetics can help create a more just and equal society In recent years, scientists like Kathryn Paige Harden have shown that DNA makes us different, in our personalities and in our health—and in ways that matter for educational and economic success in our current society. In **The Genetic Lottery**, Harden introduces readers to the latest genetic science, dismantling dangerous ideas about racial superiority and challenging us to grapple with what equality really means in a world where people are born different. Weaving together personal stories with scientific evidence, Harden shows why our refusal to recognize the power of DNA perpetuates the myth of meritocracy, and argues that we must acknowledge the role of genetic luck if we are ever to create a fair society. Reclaiming genetic science from the legacy of eugenics, this groundbreaking book offers a bold new vision of society where everyone thrives, regardless of how one fares in the genetic lottery.

Safety of Genetically Engineered Foods

Approaches to Assessing Unintended Health Effects

National Academies Press Assists policymakers in evaluating the appropriate scientific methods for detecting unintended changes in food and assessing the potential for adverse health effects from genetically modified products. In this book, the committee recommended that greater scrutiny should be given to foods containing new compounds or unusual amounts of naturally occurring substances, regardless of the method used to create them. The book offers a framework to guide federal agencies in selecting the route of safety assessment. It identifies and recommends several pre- and post-market approaches to guide the assessment of unintended compositional changes that could result from genetically modified foods and research avenues to fill the knowledge gaps.

The Case against Perfection

Harvard University Press Breakthroughs in genetics present us with a promise and a predicament. The promise is that we will soon be able to treat and prevent a host of debilitating diseases. The predicament is that our newfound genetic knowledge may enable us to manipulate our nature—to enhance our genetic traits and those of our children. Although most people find at least some forms of genetic engineering disquieting, it is not easy to articulate why. What is wrong with re-engineering our nature? The Case against Perfection explores these and other moral quandaries connected with the quest to perfect ourselves and our children. Michael Sandel argues that the pursuit of perfection is flawed for reasons that go beyond safety and fairness. The drive to enhance human nature through genetic technologies is objectionable because it represents a bid for mastery and dominion that fails to appreciate the gifted character of human powers and achievements. Carrying us beyond familiar terms of political discourse, this book contends that the genetic revolution will change the way philosophers discuss ethics and will force spiritual questions back onto the political agenda. In order to grapple with the ethics of enhancement, we need to confront questions largely lost from view in the modern world. Since these questions verge on theology, modern philosophers and political theorists tend to shrink from them. But our new powers of biotechnology make these questions unavoidable. Addressing them is the task of this book, by one of America's preeminent moral and political thinkers.

Genes, Behavior, and the Social Environment

Moving Beyond the Nature/Nurture Debate

National Academies Press Over the past century, we have made great strides in reducing rates of disease and enhancing people's general health. Public health measures such as sanitation, improved hygiene, and vaccines; reduced hazards in the workplace; new drugs and clinical procedures; and, more recently, a growing understanding of the human genome have each played a role in extending the duration and raising the quality of human life. But research conducted over the past few decades shows us that this progress, much of which was based on investigating one causative factor at a time—often, through a single discipline or by a narrow range of practitioners—can only go so far. Genes, Behavior, and the Social Environment examines a number of well-described gene-environment interactions, reviews the state of the science in researching such interactions, and recommends priorities not only for research itself but also for its workforce, resource, and infrastructural needs.

Parenting Matters

Supporting Parents of Children Ages 0-8

National Academies Press Decades of research have demonstrated that the parent-child dyad and the environment of the family—“which includes all primary caregivers”—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Epigenetic Mechanisms of Gene Regulation

Many inheritable changes in gene function are not explained by changes in the DNA sequence. Such epigenetic mechanisms are known to influence gene function in most complex organisms and include effects such as transposon function, chromosome imprinting, yeast mating type switching and telomeric silencing. In recent years, epigenetic effects have become a major focus of research activity. This monograph, edited by three well-known biologists from different specialties, is the first to review and synthesize what is known about these effects across all species, particularly from a molecular perspective, and will be of interest to everyone in the fields of molecular biology and genetics.

Genetic Algorithms for Machine Learning

Springer Science & Business Media The articles presented here were selected from preliminary versions presented at the International Conference on Genetic Algorithms in June 1991, as well as at a special Workshop on Genetic Algorithms for Machine Learning at the same Conference. Genetic algorithms are general-purpose search algorithms that use principles inspired by natural population genetics to evolve solutions to problems. The basic idea is to maintain a population of knowledge structure that represent candidate solutions to the problem of interest. The population evolves over time through a process of competition (i.e. survival of the fittest) and controlled variation (i.e. recombination and mutation). Genetic Algorithms for Machine Learning contains articles on three topics that have not been the focus of many previous articles on GAs, namely concept learning from examples, reinforcement learning for control, and theoretical analysis of GAs. It is hoped that this sample will serve to broaden the acquaintance of the general machine learning community with the major areas of work on GAs. The articles in this book address a number of central issues in applying GAs to machine learning problems. For example, the choice of appropriate representation and the corresponding set of genetic learning operators is an important set of decisions facing a user of a genetic algorithm. The study of genetic algorithms is proceeding at a robust pace. If experimental progress and theoretical understanding continue to evolve as expected, genetic algorithms will continue to provide a distinctive approach to machine learning. Genetic Algorithms for Machine Learning is an edited volume of original research made up of invited contributions by leading researchers.

Full length practice tests paralleling the actual exams are presented in our companion volume, REA's The Best Test Preparation for the CLEP General Exams. ABOUT THE CLEP GENERAL CBTs Who takes the CLEP General CBTs and what are they used for? CLEP examinations are usually taken by people who have acquired knowledge outside the classroom and wish to bypass certain college courses and earn college credit. The College-Level Examination Program is designed to reward students for learning - no matter where or how that knowledge was acquired. More than 2,900 colleges grant credit and/or advanced standing for CLEP exams. This makes CLEP the most widely accepted credit-by-examination program in the country. Although most CLEP examinees are adults returning to college, many graduating high school seniors, enrolled college students, and international students also take the exams to earn college credit or to demonstrate their ability to perform at the college level. There are no prerequisites, such as age or educational status, for taking CLEP examinations. However, you must meet specific requirements of the particular institution from which you wish to receive CLEP credit. Most CLEP examinations include material usually covered in an undergraduate course with a similar title to that of the exam (e. g., History of the United States I). However, the five exams covered in this book do not deal with subject matter covered in any particular course but rather with material taken as general requirements during the first two years of college. These general exams are English Composition (with or without essay), Humanities, College Mathematics, Natural Sciences, and Social Sciences and History. Who administers the exams? The CLEP is developed by the College Board, administered by Educational Testing Service (ETS), and involves the assistance of educators throughout the country. The test development process is designed and implemented to ensure that the content and difficulty level of the test are appropriate. When and where are the exams given? The CLEP General Examinations are offered year-round at some 1,400 test centers in the United States and abroad. To find the test center nearest you and to register for the exam, you should obtain a copy of the free booklets CLEP Colleges and CLEP Information for Candidates and Registration Form, which are available at most colleges where CLEP credit is granted, or by contacting: CLEP Services P.O. Box 6600 Princeton, NJ 08541-6600 Phone: (609) 771-7865 Website: <http://www.collegeboard.com> HOW TO USE THIS BOOK What do I study first? Read over this introduction and our suggestions for test-taking, take the first practice test in your subject to determine your area(s) of weakness, and then go back and focus your studying on those specific problems. Make copies of the appropriate answer sheets each time you take a practice test (answer sheets are located at the back of this book). Studying each subject thoroughly will reinforce the basic skills you will need to do well on the exam. Be sure to take the practice tests to become familiar with the format and procedures involved with taking the actual exam - and, of course, to make yourself completely comfortable with the material. To best utilize your study time, follow our CLEP General Examinations Independent Study Schedule located in the front of this book. This schedule is designed to guide you through one General Examination at a time. You should repeat the schedule for each exam for which you're preparing. The schedule is based on a six-week program but can be condensed to three weeks, if necessary, by collapsing each two-week period into one. When should I start studying? It is never too early to start studying for the CLEP General Examinations. The earlier you begin, the more time you will have to sharpen your skills. Do not procrastinate! Cramming is not an effective way to study, since it does not allow you the time needed to learn the test material. The sooner you learn the format of the exam, the more time you will have to familiarize yourself with it. FORMAT OF THE CLEP GENERAL CBTs The five computer-based CLEP General Examinations cover material taught in classes that most students take as requirements in the first two years of college. The General CBT in English Composition gauges the skills you would need to complete most first-year college composition courses. There are two versions of the English Composition exam - with essay and without essay. (Credit-granting policies differ among colleges. Check with your prospective school to find out which version is accepted.) The first version has approximately 90 multiple-choice questions, each with five possible answer choices, to be answered in 90 minutes. The second version has one section with approximately 50 multiple-choice questions, each with five answer choices, and a second section with one essay. The student has 45 minutes to complete each of the two sections. The approximate breakdown of topics is as follows: All-Multiple-Choice Version Skills at the Sentence Level (55%) - Sentence boundaries - Economy and clarity of expression - Concord/Agreement: subject-verb; verb tense; pronoun reference, shift, number - Active/passive voice - Diction and idiom - Syntax: parallelism, coordination, subordination, dangling modifiers - Sentence variety Types of Questions Associated with These Skills: * Identifying Sentence Errors: Candidate pinpoints violations of standard conventions of expository writing. * Improving Sentences: Candidate chooses the phrase, clause, or sentence that best conveys a sentence's intended meaning. * Restructuring Sentences: Candidate chooses the phrase that, because it most effectively shifts a sentence's emphasis or improves its clarity, would most likely appear in the new sentence created by the revision. Skills in Context (45%) - Main idea, thesis - Organization of ideas in paragraph or essay form - Relevance of evidence, sufficiency of detail, levels of specificity - Audience and purpose (effect of style, tone, language, or argument) - Logic of argument (inductive, deductive reasoning) - Coherence within and between paragraphs - Rhetorical emphasis, effect - Sustaining tense or point of view - Sentence joining, sentence variety Types of Questions Associated with These Skills: * Revising Work in Progress: Candidate identifies ways to improve an early draft of an essay. * Analyzing Writing: Candidate answers questions about two prose passages written in distinctly different styles and about the strategies used by the author of each passage. Multiple-Choice-with-Essay Version (Two Sections): Section I - Multiple-Choice (50%) - Skills at the Sentence Level (30%) See explanation for all-multiple-choice version. - Skills in Context (20%) See explanation for all-multiple-choice version. Section II - Essay (50%) - Candidate presents a point of view in response to a topic and supports it with a logical argument and appropriate evidence. The Humanities CBT features 140 multiple-choice questions, each with five answer choices, to be answered in 90 minutes. The reviews are designed to further students' understanding of the test material. Each review contains a description of what to expect on the examination and a thorough review of the major topics found on the exams. The English composition review is broken down into two areas - English language skills and writing skills. The humanities review is broken down into five areas - literature, visual arts and architecture, philosophy, music and performing arts. The mathematics review is broken down into seven areas - arithmetic, algebra, geometry and trigonometry, sets and logic, real and complex numbers, functions, and probability and statistics. The natural sciences review is broken down into seven areas - biology, chemistry, physics, earth science,

geology, astronomy, and meteorology. The social sciences review is broken down into eight areas - political science, sociology, economics, psychology, geography, anthropology, western and world civilization, and United States history. **SCORING THE CLEP GENERAL CBTs** The CLEP General Examinations are scored on a scale of 200 to 800. This does not apply, however, to the English Composition with Essay Questions Exam. The essays on this exam are scored on a scale of 2 to 8. There is a drill question in the writing skills section of the English Composition review that asks you to write an essay on a given topic. To score your essay, we suggest you give it to two English teachers or professors to grade. Refer to the completed essays in the detailed explanations of answers section of the review for scoring criteria. The completed essays will show you what the judges will be looking for, and the essay score from the English teachers will help you judge your progress. When will I receive my score report? Right after you finish (except for the English Composition essay, which requires human graders and whose score will be mailed to you), the computer will generate a printout of your score report, which the administrator will hand you. If you want your scores reported to a college or other institution, you must fill in the correct code number on your answer sheet at the time you take the examination. Since your scores are kept on file for 20 years, you may also request transcripts from ETS at a later date. **STUDYING FOR THE CLEP GENERAL CBTs** It is crucial for you to choose the time and place for studying that works best for you. Some students set aside a certain number of hours every morning, while others choose to study at night before going to sleep. Only you can determine when and where your study time will be most effective. But be consistent and use your time wisely. Work out a study routine and stick to it! When you take our practice tests, try to make your testing conditions as much like the actual test as possible. Turn off the television or radio, and sit down at a quiet table or desk free from distraction. Use a timer to ensure that each section is accurately clocked. As you complete each practice test, score it and thoroughly review the explanations for the questions you answered incorrectly; however, do not review too much at one sitting. Concentrate on one problem area at a time by reviewing the question and explanation, and by studying our review until you are confident that you completely understand the material. Keep track of your scores and mark them on the scoring worksheet. By doing so, you will be able to gauge your progress and discover general weaknesses in particular sections. You should carefully study the review sections that cover your areas of difficulty, as this will build your skills in those areas. If you do poorly on a section, do not develop a negative attitude - it only means you need to further review the material. You should carefully study the reviews that cover your areas of difficulty, as this will build your skills in those areas. A negative attitude could prove to be your biggest stumbling block. It is important that you get a good start and that you are positive as you review and study the material. **TEST-TAKING TIPS** You may never have taken a standardized computer-based test, but it's not hard to learn the things you need to know to be comfortable on test day. Know the format of the CBT. CLEP CBTs are not adaptive but rather fixed-length tests. In a sense, this makes them kin to the familiar pen-and-paper exam in that you have the same flexibility to back and review your work in each section. Moreover, the format hasn't changed a great deal from the paper-and-pencil CLEP. You are likely to see some so-called pretest questions as well, but you won't know which they are and they won't be scored. Use the process of elimination. If you don't immediately see the correct answer among the choices, go down the list and eliminate as many as you can. Confidently casting aside choices will help you isolate the correct response, or at least knock your choices down to just a few strong contenders. This approach has the added benefit of keeping you from getting sidetracked and distracted by what in fact may be just an occasional tricky question. Importantly, your score is based only on the number of questions you answer correctly. Read all of the possible answers. Just because you think you have found the correct response, do not automatically assume that it is the best answer. Read through each choice to be sure that you are not making a mistake by jumping to conclusions. Work quickly and steadily. You will have only 45 minutes to work on an average of 50 questions in each section, so work quickly and steadily to avoid focusing on any one question too long. Taking our practice tests will help you learn to budget your time. Acquaint yourself with the CBT screen. Familiarize yourself with the CLEP CBT screen beforehand by logging onto the College Board Website. Waiting until test day to see what it looks like in the pretest tutorial risks injecting needless anxiety into your testing experience. Be sure that your answer registers before you go to the next item. Look at the screen to see that your mouse-click causes the pointer to darken the proper oval. This takes far less effort than darkening an oval on paper, but don't lull yourself into taking less care! **THE DAY OF THE EXAM** Preparing to Take the CLEP CBT On the day of the test, you should wake up early (after a decent night's rest, one would hope) and have a good breakfast. Dress comfortably so that you are not distracted by being too hot or too cold while taking the test. Plan to arrive at the test center early. This will allow you to collect your thoughts and relax before the test, and will also spare you the anxiety that comes with being late. No one will be allowed into the test session after the test has begun. Before you set out for the test center, make sure that you have your admission form, Social Security number, and a photo ID with your signature (e.g., driver's license, student identification card, or current alien registration card). The test center administrator will ask you for photo ID when you arrive. After your test center fee is collected and registration is completed, you will be assigned to a computer. You will then key in the standard personal information, including credit card information. Next, you'll take the tutorial. During the Test Finally the exam will be upon you. Here's what to expect: - Since it's built right into the CLEP testing software, an on-screen non-graphing scientific calculator will pop up for the College Mathematics CBT. You should take into account, however, that a calculator is not deemed necessary to answer any of the test's questions. - Scrap paper will be provided to you for all CLEP CBT examinations. - At times your computer may seem to slow down. Don't worry: the built-in timer will not advance until your next question is fully loaded and visible on screen. - Just as you can on a paper-and-pencil test, you'll be able to move freely between questions within a section. - You'll have the option to mark questions and review them. - You may wear a wristwatch to the test center, but it cannot make any noise which could disturb your fellow test-takers. - No computers, dictionaries, textbooks, notebooks, scrap paper, briefcases, or packages will be permitted into the test center; drinking, smoking, and eating are prohibited. You may, however, bring your own nonprogrammable calculator if you're sitting for the CLEP College Mathematics CBT. Consult College Board publications (including the Collegeboard.com website) for details. After the Test Once you have informed the test center administrator that you're done, you will end your session on the computer, which in turn will generate the printout of a score report (except for the English Composition essay, which requires human graders and whose score will be mailed to you) that the administrator will hand you. Then, go home and relax - you deserve it!

Resources for Teaching Middle School Science

National Academies Press With age-appropriate, inquiry-centered curriculum materials and sound teaching practices, middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them. Resources for Teaching Middle School Science, developed by the National Science Resources Center (NSRC), is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of Resources for Teaching Elementary School Science, the first in the NSRC series of annotated guides to hands-on, inquiry-centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area-Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type-core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved and of what students can be expected to learn, a list of accompanying materials, a reading level, and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs, chapters on books about science and teaching, directories and guides to science trade books, and periodicals for teachers and students. Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer resources and assistance. Authoritative, extensive, and thoroughly indexed-and the only guide of its kind-Resources for Teaching Middle School Science will be the most used book on the shelf for science teachers, school administrators, teacher trainers, science curriculum specialists, advocates of hands-on science teaching, and concerned parents.

Preventive and Predictive Genetics: Towards Personalised Medicine

Springer Pharmacogenomics supports personalized medicine by translating genome-based knowledge into clinical practice, offering enhanced benefit for patients and health-care systems at large. Current routine practice for diagnosing and treating patients is conducted by correlating parameters such as age, gender and weight with risks and expected treatment outcomes. In the new era of personalized medicine the healthcare provider is equipped with improved ability to prevent, diagnose, treat and predict outcomes on the basis of complex information sources, including genetic and genomic data. Targeted therapy and reliable prediction of expected outcomes offer patients access to better healthcare

management, by way of identifying the therapies effective for the relevant patient group, avoiding prescription of unnecessary treatment and reducing the likelihood of developing adverse drug reactions.
