## Winning Sustainability Strategies

### Finding Purpose, Driving Innovation and Executing Change

Springer Despite recent optimism and global initiatives, the implementation of corporate sustainability programs has been slow at best, with less than a third of global companies having developed a clear business case for their approach to sustainability. Presenting numerous award-winning cases and examples from companies such as Unilever, Patagonia, Tumi, DSM and Umicore alongside original ideas based upon 20

years of consulting experience, this book reveals how to design and implement a stronger sense of focus and move sustainability programs forward. This proven combination of purpose, direction and speed is dubbed “Vectoring”. Based upon practitioner cases and data analysis from the Dow Jones Sustainability Index, Vectoring offers a plain-spoken framework to identify the relative position of companies compared to their peers. The framework and its 4 archetypes deliver insights for practitioners to locate inhibitors and overcome them by providing practical suggestions for process improvements. This includes designing and executing new sustainability programs, embedding the SDGs within company strategy and assessing the impact of sustainability programs on competitiveness and valuation. Offering directions for CFOs to shift companies from integrated reporting to integrated thinking in order to accelerate their sustainability programs, *Winning Sustainability Strategies* shows how to achieve purpose with profit and how to do well by doing good.

## Smart Business Networks

Springer Science & Business Media Scientists from management and strategy, information systems, engineering and telecommunications have discussed a novel concept: Smart Business Networks. They see the future as a developing web of people and organizations, bound together in a dynamic and unpredictable way, creating smart outcomes from quickly (re-)configuring links between actors. The question is: What should be done to make the outcomes of such a network 'smart', that is, just a little better than that of your competitor? More agile, with less pain, with more return to all the members of the network, now and over time? The technical answer is to create a 'business operating system' that should run business processes on different organisational platforms. Business processes would become portable: The end-to-end management of processes running across many different organizations in many different forms would become possible. This book presents you the outcomes of an energizing and new direction in management science.

# Scientific Engineering for Distributed Java Applications International Workshop, FIDJI 2002, Luxembourg, Luxembourg, November 28-29, 2002, Revised Papers

Springer FIDJI 2002 was an international forum for researchers and practitioners interested in the advances in, and applications of, software engineering for distributed application development. Concerning the technologies, the workshop focused on "Java-related" technologies. It was an opportunity to present and observe the latest research, results, and ideas in these areas. All papers submitted to this workshop were reviewed by at least two members of the International Program Committee. Acceptance was based primarily on the originality and contribution. We selected for these postworkshop proceedings 16 papers amongst 33 submitted, two tutorials, and two keynotes. FIDJI 2002 was aimed at promoting a scientific approach to software engineering. The scope of the workshop included the following topics: - design of distributed Java applications - Java-related technologies - software and system architecture engineering and development methodologies - development methodologies for UML - development methodologies for reliable distributed systems - component-based development methodologies - management of evolutions/iterations in the analysis, design, implementation, and test phases - dependability support during system lifecycle - managing inconsistencies during application development - atomicity and exception handling in system development - software architectures, frameworks, and design patterns for developing distributed systems - integration of formal techniques in the development process - formal analysis and grounding of modeling notation and techniques (e. g.

## Industrial Clusters and Micro and Small Enterprises in Africa From Survival to Growth

World Bank Publications The World Bank, Japan International Cooperation Agency (JICA) Research Institute, and the Foundation for Advanced Studies on International Development (FASID), in collaboration with researchers affiliated with the African Economic Research Consortium (AERC), recently conducted a study on Africa's domestic enterprises to improve the understanding of the constraints micro and small enterprises in Africa face in improving productivity and expanding their markets. In Africa, there are stark performance gaps between domestically owned enterprises and foreign-owned enterprises in terms of sales performance, productivity, and ability to reach distant markets. Among others, size appears to be a dominant factor in explaining the gap. Against this background, the study analyzes how naturally formed industrial clusters concentrations of enterprises engaged in same or closely related industrial activities in specific locations could potentially mitigate constraints Africa's micro and small enterprises face and enhance their business performance. The study is one of the first comprehensive quantitative inquiries on industrial clusters in Africa. The analysis specifically focuses on the role of spontaneously grown clusters of light manufacturing industries based on a set of original case studies of industrial clusters conducted for this research project. One of the key findings from the case studies was that cluster-based micro and small enterprises are performing better than similar micro and small enterprises outside of the clusters in terms of sales performance and ability to reach distant markets. Market access is a leading reason for cluster-based enterprises to choose their current locations. However, cluster-based enterprises face another set of unique growth constraints. By the very nature of spontaneous agglomeration, new enterprises continue to flow to the clusters seeking the profit opportunities and better access to markets at such locations. The result can be intense competition in addition to increased congestion. Space constraints often impede growth within clusters. The lack of alternative locations available for industrial activities in the same cities, generic infrastructure bottlenecks, and unclear zoning policies and their

unpredictable changes limit firms location choices and constrain their mobility. While competition should improve efficiency, lack of capacity among those competing cluster-based enterprises to invest and innovate does not generate growth out of the competition. The vast majority of naturally formed clusters of light manufacturing industries in Africa are still at a survival level, where agglomeration externalities are only limited to expand quantity but not quality as we observe in more advanced innovation-oriented clusters in elsewhere in the world. Existing studies on such natural industrial clusters in Africa have found that the lack of managerial skills among entrepreneurs running micro and small enterprises is a major constraint for innovation and growth in the clusters. As a part of this study, pilot managerial skills training programs were conducted in two industrial clusters on an experimental basis, where a group of randomly selected entrepreneurs within the clusters were given three-week long crash course of based management such as bookkeeping, marketing, business planning, and production management. The impact evaluation of the experiments showed significant positive impacts of the training programs on value added and gross profits of enterprises. Raising the current survival-type industrial clusters, which have been formed as a coping mechanism to weak investment climate, into more dynamic innovating clusters will be an important avenue for fostering growth of micro and small enterprises in Africa. While national efforts to improve investment climate and investments in human capital are undoubtedly important, there could be more targeted policies to be formulated, in complementing general policies, to support growth of micro and small domestic enterprises using existing industrial clusters as a natural springboard for their growth. In that context, the study discusses the merit of cluster-based managerial human capital development to build steps toward more innovation-oriented clusters, the importance of sound spatial planning policy, particularly at the local level in the context of urban planning, the need to expand market access and economic linkages for industrial clusters including regional integration and linkages with large enterprises.

# Metallized Plastics 1

## Fundamental and Applied Aspects

**Springer Science & Business Media** This volume chronicles the proceedings of the Symposium on Metallized Plastics: Fundamental and Applied Aspects held under the auspices of the Dielectrics and Insulation Division of the Electrochemical Society in Chicago, October 10-12, 1988. This was the premier symposium on this topic and if the comments from the attendees are any barometer of the success of a symposium then it was a grand success. Concomitantly, it has been decided to hold it on a regular basis (at intervals of 18 months) and the second event in this series is planned as a part of the Electrochemical Society meeting in Montreal, Canada, May 6-10, 1990. Metallized plastics find a legion of applications ranging from mundane to very sophisticated. A complete catalog of the various technological applications of metallized plastics will be prohibitively long, so here some eclectic examples should suffice to show why there is such high tempo of R&D activity in the arena of metallized plastics, and all signals indicate that this high tempo will continue unabated. For example, polymeric films are metallized for packaging (food and other products) purposes, and the applications of metallized plastics in the automotive industry are quite obvious. In the field of microelectronics and computer technology, insulators are metallized for interconnection and other functional purposes. Also plastics are metallized to provide electromagnetic shielding.
