Strategies to Improve Cardiac Arrest Survival

A Time to Act

National Academies Press Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

All-in-One Nursing Care Planning Resource - E-Book

Medical-Surgical, Pediatric, Maternity, and Psychiatric-Mental Health

Elsevier Health Sciences Introducing a plan for success with the only nursing care planning reference book for all core clinical areas! Swearingen's All-In-One Nursing Care Planning Resource, 5th Edition, features over 100 care plans including medical-surgical, maternity/OB, pediatrics, and psychiatric-mental health to help you care for patients in any setting. This new edition is the first in the market to include a unique, interprofessional, "patient problem" focus that teaches students how to speak to patients in conversational terms rather than in nursing-specific language. New non-medical-surgical care plans and updated content throughout reflect the latest evidence-based treatment guidelines for national and international clinical practice. Plus, with its clear approach, easy-to-use format, and straightforward rationales, you can use this one book throughout their entire nursing curriculum! Bolded and highlighted Safety Icons corresponds to the safety competency of the Quality and Safety Education for Nurses (QSEN) initiative for easier recognition. Care plans for all four major clinical areas include medical-surgical, OB/maternity, pediatric, and psychiatric-mental health nursing care plans. A consistent format for each care plan enables you to perform faster searches, with headings for Overview/Pathophysiology, Health Care Setting, Assessment, Diagnostic Tests, Patient Problems, Desired Outcomes, Interventions with Rationales, and Patient-Family Teaching and Discharge Planning. Prioritized patient problems are listed in order of importance and physiologic patient needs. Detailed rationales for each nursing intervention help you apply concepts to specific patient situations in clinical practice. Full-color design makes the book more user friendly and includes color-coded tabs and improved cross-referencing and navigation aids for faster information retrieval. NEW! UNIQUE! Interprofessional "patient problems" focus familiarizes you with how to speak to patients and other medical colleagues in the consistent interprofessional language of "patient problems," rather than the nursing-specific language of nursing diagnosis. NEW! Care plans helps you to support the lesbian, gay, bisexual, transgender, queer/questioning, or intersex patient. NEW! Updated content throughout reflects the latest evidence-based treatment guidelines and national and international clinical practice guidelines.

Pain Management

A Problem-Based Learning Approach

Oxford University Press Pain Management: A Problem-Based Learning Approach provides a comprehensive review of the dynamic and ever-changing field of pain medicine. Its problem-based format incorporates a vast pool of practical, ABA board-exam-style multiple-choice questions for self-assessment. Each its 46 case-based chapters is accompanied by 20 questions and answers, accessible online in a full practice exam. The cases presented are also unique, as each chapter starts with a case description, usually a compilation of several actual cases; it then branches out through case-based questions, to increasingly complex situations. This structure is designed to create an authentic experience that mirrors that of an oral board examination. The discussion sections that follow offer a comprehensive approach to the chapter's subject matter, thus creating a modern, complete, and up-to-date medical review of that topic. This book is equally a solid reference compendium of pain management topics and a comprehensive review to assist the general practitioner both in day-to-day practice and during preparation for certification exams. Its problem-based format makes it an ideal resource for the lifelong learner and the modern realities of education.

Acute Heart Failure

Springer Science & Business Media For many years, there has been a great deal of work done on chronic congestive heart failure while acute heart failure has been considered a difficult to handle and hopeless syndrome. However, in recent years acute heart failure has become a growing area of study and this is the first book to cover extensively the diagnosis and management of this complex condition. The book reflects the considerable amounts of new data reported and many new concepts which have been proposed in the last 3-4 years looking at the epidemiology, diagnostic and treatment of acute heart failure.

The Prevention of Sudden Cardiac Death

Wiley-Liss Presenting the latest diagnostic and therapeutic developments in a multifaceted field, this book addresses the problems involved in preventing sudden cardiac death (SCD), focusing on risk stratification techniques designed to direct the selection and application of appropriate treatment modalities. Material reflects recent discoveries concerning the epidemiology and SCD pathophysiology, offering guidelines for more rational treatment approaches, both pharmacologic and interventional. The text reviews the vast epidemiologic data from the Framingham Study, with special emphasis on identifying clinical risk factors and the relation of coronary heart disease to SCD. It also details the background for risk stratification based on well-established exercise testing and ambulatory electrocardiography techniques, as well as newer methods of electrophysiologic testing and signal average electrocardiography. Current prevention strategies--lifestyle alteration, prospective drug trials, surgical and implantable devices--are also discussed.

The ICU Book

Lippincott Williams & Wilkins This best-selling resource provides a general overview and basic information for all adult intensive care units. The material is presented in a brief and quick-access format which allows for topic and exam review. It provides enough detailed and specific information to address most all questions and problems that arise in the ICU. Emphasis on fundamental principles in the text should prove useful for patient care outside the ICU as well. New chapters in this edition include hyperthermia and hypothermia syndromes; infection control in the ICU; and severe airflow obstruction. Sections have been reorganized and consolidated when

appropriate to reinforce concepts.

Open Access and the Humanities Contexts, Controversies and the Future

Cambridge University Press If you work in a university, you are almost certain to have heard the term 'open access' in the past couple of years. You may also have heard either that it is the utopian answer to all the problems of research dissemination or perhaps that it marks the beginning of an apocalyptic new era of 'pay-to-say' publishing. In this book, Martin Paul Eve sets out the histories, contexts and controversies for open access, specifically in the humanities. Broaching practical elements alongside economic histories, open licensing, monographs and funder policies, this book is a must-read for both those new to ideas about open-access scholarly communications and those with an already keen interest in the latest developments for the humanities. This title is also available as Open Access via Cambridge Books Online.

Club Drugs and Novel Psychoactive Substances

The Clinician's Handbook

Cambridge University Press Emerging illicit drugs pose a significant clinical challenge. This handbook offers an engaging, concise guide to managing these challenges.

Transcatheter Valve Repair

CRC Press Transcatheter Valve Repair discusses all aspects related to percutaneous and established valve repair methods. The book is divided into few major sections covering all four valves and other topics. Each section contains several chapters discussing everything related to that valve. Beginning with the pulmonary valve, since it was the first valve to be tackled in the catheterization laboratory, and then moving to the aortic, then the mitral and then finally end with the tricuspid valve. 1.5M US citizens alone have some degree of aortic valve stenosis, with half (750K) requiring aortic valve replacement. Aortic valve replacement, on the whole, is performed by surgeons, requiring bypass machines and technicians, as well as the usual operating team. The operation is expensive and occupies a considerable amount of operating room time. Mostly, the aortic valve is calcified and the usual option available to patients is valve replacement with a variety of choices, ranging

from porcine valves to synthetic, for which there are many manufacturers. It should be noted that the aortic valve is the most problematic of valves. Percutaneous procedures are the answer. The bottom line is that given the growing elderly population, many more patients will require valve repair, thus increasing health care costs with not only surgical operations but also hospitalisation. Percutaneous valve repair, whilst requiring a cath lab team, does not involve bypass machines nor extended hospitalisation. Like percutaneous transluminal coronary artery interventions (PTCA) has replaced coronary artery bypass grafts (once the golden standard), and now stenting having replaced PTCA and its balloons. We now see drug eluting stents replacing ordinary stents (though at a much higher cost. There will be a huge movement toward percutaneous valve repair, which should presumably cut costs but also morbidity and mortality.

Pediatric Resuscitation

Attribute-Based Access Control

Artech House This comprehensive new resource provides an introduction to fundamental Attribute Based Access Control (ABAC) models. This book provides valuable information for developing ABAC to improve information sharing within organizations while taking into consideration the planning, design, implementation, and operation. It explains the history and model of ABAC, related standards, verification and assurance, applications, as well as deployment challenges. Readers find authoritative insight into specialized topics including formal ABAC history, ABAC's relationship with other access control models, ABAC model validation and analysis, verification and testing, and deployment frameworks such as XACML. Next Generation Access Model (NGAC) is explained, along with attribute considerations in implementation. The book explores ABAC applications in SOA/workflow domains, ABAC architectures, and includes details on feature sets in commercial and open source products. This insightful resource presents a combination of technical and administrative information for models, standards, and products that will benefit researchers as well as implementers of ABAC systems in the field.
