P4P programs have become widespread in health care in just the past decade and have generated a great deal of enthusiasm in health policy circles and among legislators, despite limited evidence of their effectiveness. On a positive note, this movement has developed and tested many new types of health care payment systems and has stimulated much new thinking about how to improve quality of care and reduce the costs of health care. The current interest in P4P echoes earlier enthusiasms in health policy—such as those for capitation and managed care in the 1990s—that failed to live up to their early promise. The fate of P4P is not yet certain, but we can learn a number of lessons from experiences with P4P to date, and ways to improve the designs of P4P programs are becoming apparent. We anticipate that a “second generation” of P4P programs can now be developed that can have greater impact and be better integrated with other interventions to improve the quality of care and reduce costs. **Microfilming Records Medicare Hospice Benefits A Special Way of Caring for the Terminally Ill Data Mining Healthcare and Clinical Databases** [Lulu.com](#) **Government by Contract Outsourcing and American Democracy** [Harvard University Press](#) The dramatic growth of government over the course of the twentieth century since the New Deal prompts concern among libertarians and conservatives and also among those who worry about government's costs, efficiency, and quality of service. This shift typically alters only who performs the work, not who pays or is ultimately responsible for it. “Government by contract” now includes military intelligence, environmental monitoring, prison management, and interrogation of terrorism suspects. Outsourcing government work raises questions of accountability. What role should costs, quality, and democratic oversight play in contracting out government work? What tools do citizens and consumers need to evaluate the effectiveness of government contracts? How can the work be structured for optimal performance as well as compliance with public values? **Government by Contract** explains the phenomenon and scope of government outsourcing and sets an agenda for future research attentive to workforce capacities as well as legal, economic, and political concerns. **Principles of Coding and Reimbursement for Surgeons** [Springer](#) This text provides the in-depth understanding of the mechanisms that guide coding and reimbursement.
