FINTECH IN FINANCIAL INCLUSION: MACHINE LEARNING APPLICATIONS IN ASSESSING CREDIT RISK

International Monetary Fund Recent advances in digital technology and big data have allowed FinTech (financial technology) lending to emerge as a potentially promising solution to reduce the cost of credit and increase financial inclusion. However, machine learning (ML) methods that lie at the heart of FinTech credit have remained largely a black box for the nontechnical audience. This paper contributes to the literature by discussing potential strengths and weaknesses of ML-based credit assessment through (1) presenting core ideas and the most common techniques in ML for the nontechnical audience; and (2) discussing the fundamental challenges in credit risk analysis. FinTech credit has the potential to enhance financial inclusion and outperform traditional credit scoring by (1) leveraging nontraditional data sources to improve the assessment of the borrower's track record; (2) appraising collateral value; (3) forecasting income prospects; and (4) predicting changes in general conditions. However, because of the central role of data in ML-based analysis, data relevance should be ensured, especially in situations when a deep structural change occurs, when borrowers could counterfeit certain indicators, and when agency problems arising from information asymmetry could not be resolved. To avoid digital financial exclusion and redlining, variables that trigger discrimination should not be used to assess credit rating.

GREEN DIGITAL FINANCE AND SUSTAINABLE DEVELOPMENT GOALS

Springer Nature This book aims to fill the literature gap on digital instruments and FinTech in enhancing green finance. Technological innovation can increase transparency, accountability, and speed, decentralize the financial system, improve risk management, increase competition, lower costs, improve efficiency, increase cross-sectoral collaboration and integration, and scale up green finance. Artificial intelligence (AI), distributed ledger technologies (DLT) or blockchain, peer-to-peer lending platforms, big data, Internet-based and mobile-based payment platforms, Internet of Things (IoT), matchmaking platforms including crowdlending, tokenizing green assets are potential means to scale up the green finance for achieving the SDGs. The COVID-19 pandemic, the economic downturns, and the uncertainties shrank the new investments in renewable energy projects globally. Low investment in renewable energy projects could threaten the expansion of green energy needed to provide energy security and meet SDG7 and SDG13. Investments in renewable energy projects are scarce because of several risks and a low rate of return. Although several new green financing solutions such as green bonds, green banks, green credit guarantee, carbon taxation, carbon trade, village funds, and community trust funds have been established in different countries, these are insufficient, and alternative ways to finance projects are required. The book provides several high-quality studies on utilizing digitalization, FinTech, financial innovations, and other new technologies to fill the finance gap of green projects to meet the SDG goals. The chapters are written by scholars in diverse countries and regions and include practical policy recommendations.

FINANCIAL LITERACY EDUCATION

EDU-REGULATING OUR SAVING AND SPENDING HABITS

Springer This book explores the issue of consumer financial education, responding to increased interest in, and calls to improve peoples' financial literacy skills and abilities to understand and manage their money. New conceptual frameworks introduced in the book offer academic audiences an innovative way of thinking about the project on financial literacy education. Using the concepts of 'edu-regulation' and 'financial knowledge democratisation' to analyse the financial education project in the UK, the book exposes serious, and often ignored, limitations to using information and education as tools for consumer protection. It challenges the mainstream representation of financial literacy education as a viable solution to consumer financial exclusion and poverty. Instead, it argues that the project on financial literacy education fails to acknowledge important dependences between consumer financial behaviour and the socio-economic, political, and cultural context within which consumers live. Finally, it reveals how these international and national calls for ever greater financial education oversimplify and underestimate the complexity of consumer financial decision-making in our modern times.

SOVEREIGN RISK AND DEPOSIT DYNAMICS

EVIDENCE FROM EUROPE

International Monetary Fund The unprecedented expansion of sovereign balance sheets since the global financial crisis has given a new meaning to the term sovereign risk. Developments in Europe since early 2010 presented new challenges for the functioning of private banks in an environment of heightened sovereign risk. This paper uses an innovative way of measuring the perception of sovereign risk and its impact on deposit dynamics during 2006-11. Using an extension of a common market discipline framework, it shows that exposure to sovereign risk may have limited the ability of banks in Europe to attract deposits. The results are robust to inclusion of conventional measures of bank performance and the sector-wide holdings of foreign sovereign debt.

RESEARCH ANTHOLOGY ON COLLABORATION, DIGITAL SERVICES, AND RESOURCE MANAGEMENT FOR THE SUSTAINABILITY OF LIBRARIES

IGI Global Faced with increased budget cuts, libraries must continue to advance their services through new technologies and practices in order to keep pace with the rapid changes society is currently facing. The once traditional in-person services offered can no longer be the only option, and to keep themselves afloat, libraries must offer more in terms of digital services. The convenience of offering mobile and digital services brings a new wave of accessibility to libraries and a new question on just how much libraries will need to change to meet the newfound needs of its patrons. Beyond offering these digital services, libraries are incorporating other types of technology in multifaceted ways such as utilizing artificial intelligence practices, social media, and big data management. Moreover, libraries are increasingly looking for ways to partner and collaborate with the community, faculty, students, and other libraries in order to keep abreast of the best practices and needs of their users. This reference book covers extensive ground on all the ways libraries have shifted to manage their resources, digitalize their services, and market themselves within the new technological revolution. These continued shifts for libraries come with benefits, challenges, and future projections that are critical for discussion as libraries continue to strive to remain updated and relevant in times of change. ENTREPRENEURIAL FINANCE, INNOVATION AND DEVELOPMENT

A RESEARCH COMPANION

Routledge Entrepreneurship is now unanimously considered a major engine for socio-economic development, mainly because it creates jobs and innovation. Governments around the world pay special attention to removing entrepreneurial barriers in order to support development via different policies, especially entrepreneurial finance. Developing, emerging and transition economies (DETEs) significantly differ from industrialized countries because of their specific conditions: institutions, infrastructure facilities, and bureaucratic procedures within the administrative system. Thus, firms and their entrepreneurs in and from DETEs may behave differently, particularly in terms of their financial strategies. Therefore, contextualizing is critical to better understand the relationship between entrepreneurial finance, innovation, and development in DETEs. This book provides a systematic and profound understanding of how finance, entrepreneurship, innovation, and their interactions contribute to economic development in DETEs, which cover a large number of countries in Asia, Central and Eastern Europe, Latin America, and Africa. The book mainly includes empirical studies and is divided into four parts. Part A includes four chapters which adopt a multinational approach to examine different sources and types of finance for entrepreneurship and small business in different groups of countries classified as DETEs. Part B also includes four chapters and focuses on entrepreneurial finance in specific countries belonging to the DETEs. Part C goes beyond the business scope of entrepreneurial finance and includes three chapters concerned with the relationship between finance, women's entrepreneurship, and poverty. Part D includes three chapters focusing on the comparison within developing countries as well as between developing and developed countries. This essential and comprehensive resource will find an audience amongst academics, students, educators, and practitioners, as well as policymakers and regulators.
