HANDBOOK OF MEDICAL NEUROPSYCHOLOGY

APPLICATIONS OF COGNITIVE NEUROSCIENCE

Springer Science & Business Media This handbook celebrates the abundantly productive interaction of neuropsychology and medicine. This interaction can be found in both clinical settings and research laboratories, often between research teams and clinical practitioners. It accounts for the rapidity with which awareness and understanding of the neuropsychological components of many common medical disorders have recently advanced. The introduction of neuropsychology into practice and research involving conditions without obvious neurological components follows older and eminently successful models of integrated care and treatment of the classical brain disorders. In the last 50 years, with the growing understanding of neurological disorders, neuropsychologists and medical specialists in clinics, at bedside, and in laboratories together have contributed to important clinical and scientific advances in the understanding of the common pathological conditions of the brain: stroke, trauma, epilepsy, certain movement disorders, tumor, toxic conditions (mostly alcohol-related), and degenerative brain diseases. It is not surprising that these seven pathological conditions were the first to receive attention from neuropsychologists as their behavioral symptoms can be both prominent and debilitating, often with serious social and economic consequences.

GOOGLE EARTH ENGINE APPLICATIONS

MDPI In a rapidly changing world, there is an ever-increasing need to monitor the Earth's resources and manage it sustainably for future generations. Earth observation from satellites is critical to provide information required for informed and timely decision making in this regard. Satellite-based earth observation has advanced rapidly over the last 50 years, and there is a plethora of satellite sensors imaging the Earth at finer spatial and spectral resolutions as well as high temporal resolutions. The amount of data available for any single location on the Earth is now at the petabyte-scale. An ever-increasing capacity and computing power is needed to handle such large datasets. The Google Earth Engine (GEE) is a cloud-based computing platform that was established by Google to support such data processing. This facility allows for the storage, processing and analysis of spatial data using centralized high-power computing resources, allowing scientists, researchers, hobbyists and anyone else interested in such fields to mine this data and understand the changes occurring on the Earth's surface. This book presents research that applies the Google Earth Engine in mining, storing, retrieving and processing spatial data for a variety of applications that include vegetation monitoring, cropland mapping, ecosystem assessment, and gross primary productivity, among others. Datasets used range from coarse spatial resolution data, such as MODIS, to medium resolution datasets (Worldview -2), and the studies cover the entire globe at varying spatial and temporal scales.

SUBSIDIARITY AND EU MULTILEVEL GOVERNANCE

ACTORS, NETWORKS AND AGENDAS

Routledge This book examines the theory and praxis of the legal concept of subsidiarity and the policy paradigm of multilevel governance, providing an updated overview on how subnational and national authorities engage within the EU institutional framework. Providing a theoretical assessment of real-life case studies, the book reflects on a number of key events from the negotiations of the European Convention to the process that led to the "Brexit" referendum and assesses the key agendas and institutional ethos of most actors involved in EU policymaking. It particularly focusses on the EU engagement of so-called non-privileged actors, such as subnational authorities from the UK, Germany, Austria, Italy, the Netherlands and Scandinavia, as well as national and regional parliaments. The author goes on to examine the sometimes selfish behaviour and individual agendas of the European Commission, European Parliament, Member States and even the European Court of Justice but also identifies many constructive ways of interaction that can decisively frame how EU decisions are made. This comprehensive book will be a useful reference to students, practitioners and academic researchers working in European politics, policymaking, public policy and EU law and integration.

ENGAGING THE SENSES: OBJECT-BASED LEARNING IN HIGHER EDUCATION

Routledge The use of museum collections as a path to learning for university students is fast becoming a new pedagogy for higher education. Despite a strong tradition of using lectures as a way of delivering the curriculum, the positive benefits of 'active' and 'experiential learning' are being recognised in universities at both a strategic level and in daily teaching practice. As museum artefacts, specimens and art works are used to evoke, provoke, and challenge students' engagement with their subject, so transformational learning can take place. This unique book presents the first comprehensive exploration of 'object-based learning' as a pedagogy for higher education in a broad context. An international group of authors offer a spectrum of approaches at work in higher education today. They explore contemporary principles and practice of object-based learning in higher education, demonstrating the value of using collections in this context and considering the relationship between academic discipline and object-based learning as a teaching strategy.

NEW BUSINESS CREATION

AN INTERNATIONAL OVERVIEW

Springer Science & Business Media Understanding the origins of new businesses — the firm creation process—has been dramatically affected by the development of longitudinal studies of business start-ups. Several projects have been implemented to track the development of new firms, from the emergence of a business idea and organization of a start-up team through the birth of an operational business. The U.S. projects (the first and second Panel Studies of Entrepreneurial Dynamics, known as PSED I and II) have counterparts in a number of other countries: Australia, Canada, China, Latvia, Netherlands (two projects), Norway, and Sweden. These eleven projects in nine countries, implemented over the past decade, are at different stages of development and have been utilized for a wide range of assessments of entrepreneurial and business creation phenomena. This volume presents the state of the art of these international research projects, providing the first in-depth comparison of the firm creation data across a wide range of national contexts. The work will be of great interest to the research community, particularly those developing such projects in their own countries, as well as policy makers and scholars interested in the effect of national context on the business creation process.

ENTREPRENEURSHIP IN THE CREATIVE INDUSTRIES

AN INTERNATIONAL PERSPECTIVE

Edward Elgar Publishing The book is like a delicious smörgåsbord with a variety of contributions within creative industries research. David Rylander, Papers in Regional Science This book positions itself with an international approach and with a focus on entrepreneurship. My perception is that this will be read with major interest by policymakers around the world, who right now consider how to form strategies and construct policies to support their own creative industries. . . The book raises interesting aspects of creative industries in comparison to more traditional industries. . . Charlotta Mellander, International Small Business Journal This collection of papers adds some new dimensions to the current creative entrepreneurship research agenda. It highlights the valuable economic and social contribution of the sector but also encourages policymakers, educators and trainers to continue to evaluate the critical role they play in the creative enterprise development process. Culturelink . . . a delight to read. The book is novel and covers an important area of entrepreneurship that is definitely worthy of more attention. The book is useful to practitioners in the creative industries field that want to learn more about the international importance of the sector and also to academics who conduct research in the area. Vanessa Ratten, Journal of Enterprising Communities There is increasing conversation about this industry at conferences around the world. This book would be helpful in putting definitional boundaries around the topic and bringing together the latest research on the topic. It has an automatic international scope, has an interesting selection of subtopics including gender, trends, and economic contributions and is cleverly organized. Patricia G. Greene, Babson College, US The creative industries represent a vital, exciting and rapidly changing field of activity; one that is now recognised as a key growth sector in the knowledge-based economy. However, there is still a general lack of understanding of what is meant by the term creative industry , and thxe creative sector has not, to date, been the subject of concerted academic research. This book redresses the balance by providing valuable insights into the creative entrepreneurial process and platforming some of the key challenges yet to be addressed. A range of pertinent and diverse topics relating to

creative entrepreneurship are dealt with, including the different quantitative and qualitative methodologies adopted by researchers in this field. In addition, the nature of creative entrepreneurship across different industry sub-sectors and in different economic and geographical contexts is examined. Illustrating the valuable economic and social contribution of the creative industries sector, Entrepreneurship in the Creative Industries aims to encourage policymakers, educators and trainers to continue to evaluate their critical role in the creative enterprise development process. Students and researchers in entrepreneurship and creative industries fields will also find the book to be an illuminating read.

THE KNOWLEDGE GAP

THE HIDDEN CAUSE OF AMERICA'S BROKEN EDUCATION SYSTEM--AND HOW TO FIX IT

Penguin The untold story of the root cause of America's education crisis--and the seemingly endless cycle of multigenerational poverty. It was only after years within the education reform movement that Natalie Wexler stumbled across a hidden explanation for our country's frustrating lack of progress when it comes to providing every child with a quality education. The problem wasn't one of the usual scapegoats: lazy teachers, shoddy facilities, lack of accountability. It was something no one was talking about: the elementary school curriculum's intense focus on decontextualized reading comprehension "skills" at the expense of actual knowledge. In the tradition of Dale Russakoff's *The Prize* and Dana Goldstein's *The Teacher Wars*, Wexler brings together history, research, and compelling characters to pull back the curtain on this fundamental flaw in our education system--one that fellow reformers, journalists, and policymakers have long overlooked, and of which the general public, including many parents, remains unaware. But *The Knowledge Gap* isn't just a story of what schools have gotten so wrong--it also follows innovative educators who are in the process of shedding their deeply ingrained habits, and describes the rewards that have come along: students who are not only excited to learn but are also acquiring the knowledge and vocabulary that will enable them to succeed. If we truly want to fix our education system and unlock the potential of our neediest children, we have no choice but to pay attention.

IT SECURITY RISK MANAGEMENT

PERCEIVED IT SECURITY RISKS IN THE CONTEXT OF CLOUD COMPUTING

Springer Gabler This book provides a comprehensive conceptualization of perceived IT security risk in the Cloud Computing context that is based on six distinct risk dimensions grounded on a structured literature review, Q-sorting, expert interviews, and analysis of data collected from 356 organizations. Additionally, the effects of security risks on negative and positive attitudinal evaluations in IT executives' Cloud Computing adoption decisions are examined. The book's second part presents a mathematical risk quantification framework that can be used to support the IT risk management process of Cloud Computing users. The results support the risk management processes of (potential) adopters, and enable providers to develop targeted strategies to mitigate risks perceived as crucial.
