The most efficient, readable, and reasonable option for preparing for the Texas Medical Jurisprudence Examination, a required test for physician licensure in Texas. This short book is intended to be something that you can read over a few times for a few hours before your test and easily pass for a reasonable price, with enough context to make it informative and professionally meaningful without being a \$200 video course or a 300-page legal

treatise. After all, the Texas JP exam isn't Step 1-it's a \$58 pass/fail test!

REGULATING AGED CARE

RITUALISM AND THE NEW PYRAMID

Edward Elgar Publishing 'Regulating Aged Care is a significant achievement and addresses areas of personal caring which do not usually receive attention. [It] is an important book which draws attention to the central problems of providing care for large numbers of vulnerable people. . . [it] should be required reading on undergraduate and postgraduate courses relating to applied social science, health and medical sociology.' Alison M. Ball, Sociology 'This book provides an impressive evidence base for both theory development and reassessment of policy and practitioner responses in the field.' International Social Security Review 'They have given us a fascinating case study here, rich in detail, and masterfully interpreted against the backdrop of evolving regulatory strategy. It is rare indeed to find this depth of analysis made accessible, laced throughout with humanity, compassion, and humor.' Malcolm Sparrow, Harvard University, US 'This book offers an intelligent and insightful account of the development of nursing home regulation in three countries England, the USA and Australia. But, more than that, it intertwines theory and more than a decade of empirical work to provide a telling and sophisticated explanation of why and how good regulatory intentions often go awry, and what can be done to create systems of regulation which really work to produce improvement.' Kieran Walshe, University of Manchester, UK This book is a major contribution to regulatory theory from three members of the world-class regulatory research group based in Australia. It marks a new development in responsive regulatory theory in which a strengths-based pyramid complements the regulatory pyramid. The authors compare the accomplishments of nursing home regulation in the US, the UK and Australia during the last 20 years and in a longer historical perspective. They find that gaming and ritualism, rather than defiance of regulators, are the greatest challenges for improving safety and quality of life for the elderly in care homes. *Regulating Aged Care* shows how good regulation and caring professionalism can transcend ritualism. Better regulation is found to be as much about encouragement to expand strengths as incentives to fix problems. The book is underpinned by one of the most ambitious, sustained qualitative and quantitative data collections in both the regulatory literature and the aged care literature. This study provides an impressive evidence base for both theory development and reassessment of policy and practitioner responses in the field. The book will find its readership amongst regulatory scholars in political science, law, socio-legal studies, sociology, economics and public policy. Gerontology and health care scholars and professionals will also find much to reflect upon in the book.

THE OXFORD HANDBOOK OF COMPARATIVE CONSTITUTIONAL LAW

OUP Oxford The field of comparative constitutional law has grown immensely over the past couple of decades. Once a minor and obscure adjunct to the field of domestic constitutional law, comparative constitutional law has now moved front and centre. Driven by the global spread of democratic government and the expansion of international human rights law, the prominence and visibility of the field, among judges, politicians, and scholars has grown exponentially. Even in the United States, where domestic constitutional exclusivism has traditionally held a firm grip, use of

comparative constitutional materials has become the subject of a lively and much publicized controversy among various justices of the U.S. Supreme Court. The trend towards harmonization and international borrowing has been controversial. Whereas it seems fair to assume that there ought to be great convergence among industrialized democracies over the uses and functions of commercial contracts, that seems far from the case in constitutional law. Can a parliamentary democracy be compared to a presidential one? A federal republic to a unitary one? Moreover, what about differences in ideology or national identity? Can constitutional rights deployed in a libertarian context be profitably compared to those at work in a social welfare context? Is it perilous to compare minority rights in a multi-ethnic state to those in its ethnically homogeneous counterparts? These controversies form the background to the field of comparative constitutional law, challenging not only legal scholars, but also those in other fields, such as philosophy and political theory. Providing the first single-volume, comprehensive reference resource, the 'Oxford Handbook of Comparative Constitutional Law' will be an essential road map to the field for all those working within it, or encountering it for the first time. Leading experts in the field examine the history and methodology of the discipline, the central concepts of constitutional law, constitutional processes, and institutions - from legislative reform to judicial interpretation, rights, and emerging trends.

THE ART OF CROSS-EXAMINATION

THE OXFORD HANDBOOK OF DEPRESSION AND COMORBIDITY

Oxford Library of Psychology Depression is frequently associated with other psychiatric disorders and is often related to chronic health problems. Depressive symptoms are also common in chronically distressed close relationships and severe interpersonal difficulties in families and at work. The topic of depressive comorbidity is clearly very important, and while recent research in this area has been methodologically sophisticated, well presented, and inherently interesting, there has not been a comprehensive, academic resource that covers recent developments in this area. The Oxford Handbook of Depression and Comorbidity brings together scholarly contributions from world-class researchers to present a careful and empirically based review of depressive comorbidity. Cutting-edge chapters address

theory, research, and practice, while capturing the diversity, evidence-base, and importance of depressive comorbidity. Specific topics include the comorbidity between depression and PTSD, alcohol use, and eating, anxiety, panic, bipolar, personality, and sleep disorders, as well as schizophrenia, suicide, cardiovascular disease, cancer, pain, obesity, intimate relationships, and many more. The Oxford Handbook of Depression and Comorbidity is a unique and much-needed resource that will be helpful to a broad range of researchers and practitioners including clinical and counseling psychologists, psychiatrists, marital and family therapists, social workers, and counselors working in mental-health and general health-care settings, as well as students in these areas.

Prentice Hall Fully updated, revised, and expanded, the new edition of Legal and Ethical Issues in Nursing reflects current and emerging influences of the law, legal issues, and ethical issues on nursing practice. It addresses the expanding autonomous roles of nurses at all levels of education and licensure, and in all settings. This edition's new ethical scenarios more realistically integrate ethics with personal legal accountability, and encourage deeper reflection on connections between law and ethics. Popular features from previous editions are retained, including chapter previews, objectives, key terms, application exercises, guidelines, chapter summaries, and "You Be the Judge" features at the end of each chapter.

ASSESSING COMPETENCE IN PROFESSIONAL PERFORMANCE ACROSS DISCIPLINES AND PROFESSIONS

Springer This book examines the challenges of cross-professional comparisons and proposes new forms of performance assessment to be used in professions education. It addresses how complex issues are learned and assessed across and within different disciplines and professions in order to move the process of "performance assessment for learning" to the next level. In order to be better equipped to cope with increasing complexity, change and diversity in professional education and performance assessment, administrators and educators will engage in crucial systems thinking. The main question discussed by the book is how the required competence in the performance of students can be assessed during their professional education at both undergraduate and graduate levels. To answer this question, the book identifies unresolved issues and clarifies conceptual elements for performance assessment. It reviews the development of constructs that cross disciplines and professions such as critical thinking, clinical reasoning, and problem solving. It discusses what it means to instruct and assess students within their own domain of study and across various roles in multiple contexts, but also what it means to instruct and assess students across domains of study in order to judge integration and transfer of learning outcomes. Finally, the book examines what it takes for administrators and educators to develop competence in assessment, such as reliably judging student work in relation to criteria from multiple sources. "... the co-editors of this volume, Marcia Mentkowski and Paul F. Wimmers, are associated with two institutions whose characters are so intimately associated with the insight that assessment must be integrated with curriculum and instructional program if it is to become a powerful influence on the educational process ..." RESPONSIVE REGULATION

TRANSCENDING THE DEREGULATION DEBATE

Oxford University Press This book transcends current debate on government regulation by lucidly outlining how regulations can be a fruitful combination of persuasion and sanctions. The regulation of business by the United States government is often ineffective despite being more adversarial in tone than in other nations. The authors draw on both empirical studies of regulation from around the world and modern game theory to illustrate innovative solutions to this problem. Their ideas include an argument for the empowerment of private and public interest groups in the regulatory process and a provocative discussion of how the government can support and encourage industry self-regulation.

CRIMINAL LIABILITY IN REGULATORY CONTEXTS

A CONSULTATION PAPER

The Stationery Office In this consultation paper, the Law Commission sets out the case for reducing the scope for criminal law to be used in regulated fields such as farming, food safety, banking and retail sales. Criminal sanctions should only be used to tackle serious wrongdoing and it is out of proportion for regulators to rely wholly on the criminal law to punish and deter activities that are merely 'risky', unless the risk involved is a serious one. There has been a steep increase in the number of criminal offences created since the late 1980s to penalise risk-taking. The areas regulated cover a wide range of risk-posing activities, and involve millions of people and thousands of businesses. By turning to civil penalties for minor breaches, regulators could reduce costs to themselves and the criminal justice system by £11 million a year. In some cases, criminal prosecution can cost almost twice what the

courts obtain in fines. The paper proposes that: (i) regulatory authorities should make more use of cost-effective, efficient and fairer civil measures to govern standards of behaviour; (ii) a set of common principles should be established to help agencies consider when and how to use the criminal law to tackle serious wrongdoing, and (iii) existing low-level criminal offences should be repealed where civil penalties could be as effective. Where criminal offences are created in regulatory contexts, they should require proof of fault elements such as intention, knowledge, or a failure to take steps to avoid harm being done or serious risks posed.

VOCATIONAL REHABILITATION

WHAT WORKS, FOR WHOM, AND WHEN?

The aim of this review was to provide an evidence base for policy development on vocational rehabilitation - defined as whatever helps someone with a health problem to stay at, return to and remain at work. The focus was on adults of working age, the common health problems that account for two-thirds of long-term sickness (mild/moderate musculoskeletal, mental health and cardio-respiratory conditions) and work outcomes (staying at, returning to and remaining in work). Data from some 450 scientific reviews and reports were included in evidence tables. The review demonstrates that there is a strong scientific evidence base for many aspects of vocational rehabilitation, a good business case for it and more evidence on cost-benefits than for many health and social policy areas. Generic and condition-specific findings are reported, and practical suggestions offered for the differing types of people affected by health problems. Vocational rehabilitation should be a fundamental element of government strategy to improve the health of working age people.

HANDBOOK OF INTELLECTUAL PROPERTY RESEARCH

LENSES, METHODS, AND PERSPECTIVES

Oxford University Press The relevance of intellectual property law has increased dramatically over the last several years. Globalization, digitization, and the rise of post-industrial information-based industries have all contributed to a new prominence of IP law as one of the most important factors in driving innovation and economic development. At the same time, the significant expansion of IP rules has impacted many areas of public policy such as public health, the environment, biodiversity, agriculture, and information in an unprecedented manner. The growing importance of IP law has led to an exponential growth of academic research in this area. This book offers a comprehensive overview of the methods and approaches that could be used as guidelines to address and develop scholarly research questions related to intellectual property law. In particular, this volume aims to provide a useful resource that can be used by IP researchers who are interested in expanding their expertise in a specific research method or seek to acquire an understanding of alternative lenses that could be applied to their research. This edited collection is one of the largest compilations, to date, of existing methods and approaches from different lenses, perspectives, and experiences from a diverse group of scholars who derive from a wide range of countries, backgrounds, and legal traditions. This diversity, both regarding the topics and the authors of the contributions, is a fundamental feature of this collection, which seeks to assist IP researchers across many countries in the developing and developed world. This is an open access title available under the terms of a CC BY-NC-ND 4.0 International licence. It is offered as a free PDF download from OUP and selected open access locations.

ADVANCES IN RESEARCH AND THEORY

Praeger Pub Text This book focuses on a theoretical framework (the Four-Component

Model) and evaluations of the Defining Issues Test (DIT) developed by Rest and his coworkers. The authors assess their own work with the DIT and that of hundreds of other investigators. Among their conclusions are: formal education is correlated with moral judgment; there is evidence for Kohlberg's higher stages; moral education programs produce modest gains, and, there are no sex differences. The book is important for libraries wishing a complete collection on moral development. Choice

THE FINGERPRINT

SOURCEBOOK

CreateSpace The idea of The Fingerprint Sourcebook originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.

COURTING SOCIAL JUSTICE

JUDICIAL ENFORCEMENT OF SOCIAL AND ECONOMIC RIGHTS IN THE DEVELOPING WORLD

Cambridge University Press This book is a first-of-its-kind, five-country empirical study of the causes and consequences of social and economic rights litigation. Detailed studies of Brazil, India, Indonesia, Nigeria, and South Africa present systematic and nuanced accounts of court activity on social and economic rights in each country. The book develops new methodologies for analyzing the sources of and variation in social and economic rights litigation, explains why actors are now turning to the courts to enforce social and economic rights, measures the aggregate impact of litigation in each country, and assesses the relevance of the empirical findings for legal theory. This book argues that courts can advance social and economic rights under the right conditions precisely because they are never fully independent of political pressures.
