Yet, many existing decision-support tools for air traffic flow management take a deterministic approach to problem solving. This study aims to focus on the random and dynamic nature of flight departure delays to provide a more accurate picture of the airspace traffic situation, improve the prediction of the airspace congestion, and advance the level of decision making in aviation systems. Several models were proposed in this work based on the trends and patterns demonstrated by the delays. These models show reasonable goodness of fit, robustness to the choice of the model parameters, and good predictive capabilities. They could further advance the Enhanced Traffic Management System that is currently adopted by the Federal Aviation Administration. Mathematical algorithms used in this work can be adapted to similar problems in other fields. The book is addressed to professionals and researchers in Air Transportations and Statistics.* **Federal Trade Commission Decisions Serials in the British Library Advances in Air Traffic Engineering Selected Papers from 6th International Scientific Conference on Air Traffic Engineering, ATE 2020, October 2020, Warsaw, Poland** [Springer Nature](#) *This book offers a timely snapshot of research and developments in the area of air traffic engineering and management. It covers mathematical, modeling, reliability and optimization methods applied for improving different stages of flight operations, including both aerodrome and terminal airspace operations. It analyses and highlights important legal and safety aspects, and discusses timely issues such as those concerned with Brexit and the use of unmanned aerial vehicles. Gathering selected papers presented at the 6th edition of the International Scientific Conference on Air Traffic Engineering, ATE 2020, held in October 2020 in Warsaw, Poland, this book offers a timely and inspiring source of information for both researchers and professionals in the field of air traffic engineering and management.* **Federal Register Infrastructure for Asian Connectivity** [Edward Elgar Publishing](#) *This book addresses the prospects and challenges concerning both soft and hard infrastructure development in Asia and provides a framework for achieving Asian connectivity through regional infrastructure cooperation towards a seamless Asia. Key topics included are: ' demand estimates of national and regional infrastructure in transport, electricity, information and communication technology, and water and sanitation; ' empirical results on the costs and benefits of regional infrastructure for economies and households; ' the impact of infrastructure development on the environment and climate; ' sources and instruments of infrastructure financing; ' best practices and lessons learned from the experiences of the Asian region and other regions; and ' experiences of public-private partnership projects. This insightful book will serve as a definitive knowledge product for policymakers, academics, private sector experts and infrastructure practitioners interested in the regional and national infrastructure demand, investment and benefits in the region. Concerned officials from private and public sectors, and other experts involved in environmental and natural resources studies will also find this compendium invaluable.* **The City in Southeast Asia Patterns, Processes and Policy** [NUS Press](#) *The extended metropolitan regions of Southeast Asia are the dynamic cores of their national economies and societies and the frontiers of accelerating globalization.
