Building Communities of Engaged Readers

Reading for pleasure

Routledge **Reading for pleasure** urgently requires a higher profile to raise attainment and increase children's engagement as self-motivated and socially interactive readers. **Building Communities of Engaged Readers** highlights the concept of 'Reading Teachers' who are not only knowledgeable about texts for children, but are aware of their own reading identities and prepared to share their enthusiasm and understanding of what being a reader means. Sharing the processes of reading with young readers is an innovative approach to developing new generations of readers. Examining the interplay between the 'will and the skill' to read, the book distinctively details a reading for pleasure pedagogy and demonstrates that reader engagement is strongly influenced by relationships between children, teachers, families and communities. Importantly it provides compelling evidence

that reciprocal reading communities in school encompass: a shared concept of what it means to be a reader in the 21st century; considerable teacher and child knowledge of children's literature and other texts; pedagogic practices which acknowledge and develop diverse reader identities; spontaneous 'inside-text talk' on the part of all members; a shift in the focus of control and new social spaces that encourage choice and children's rights as readers. Written by experts in the literacy field and illustrated throughout with examples from the project schools, it is essential reading for all those concerned with improving young people's enjoyment of and attainment in reading.

Video-Based Aural Rehabilitation Guide

Enhancing Listening and Spoken Language in Children and Adults

Plural Publishing The Video-Based Aural Rehabilitation Guide: Enhancing Listening and Spoken Language in Children and Adults is the first aural rehabilitation book of its kind to intertwine chapter text with over 200 captioned videos. This unique resource is intended to educate undergraduate and graduate students in speech-language pathology, audiology, and education of the deaf and hard of hearing, as well as enhance the knowledge and skills of practicing professionals. The extensive videos are also an invaluable resource for students enrolled in a clinical or student teaching practicum. Videos feature speech-language pathologists, audiologists, Listening and Spoken Language Specialists, teachers of the deaf and hard of hearing, early interventionists, otologists, and occupational therapists practicing in settings such as clinics, private practices, schools, hospitals, and the community. Topics addressed in the text and videos include hearing technologies, aural rehabilitation procedures, factors that affect intervention outcomes, fundamentals of assessment, supports for education, counseling for children and adults with hearing loss, and the psychosocial well-being of persons with hearing loss and their families. The Video-Based Aural Rehabilitation Guide can be used as a stand-alone text or as a companion alongside the most frequently used aural rehabilitation textbooks. Key Features: * Over 200 captioned videos accessible on a companion site * Collaboration among 14 professionals in audiology, speech-language pathology, Listening and Spoken Language, medicine, education, research, and psychology * Chapters with concise summaries, recommended resources for further learning, and study questions with answer keys * Background information on the individuals featured in the videos * This exciting new text with instructional videos is a much-needed bridge that integrates the disciplines of speech-language pathology, audiology, and education of the deaf and hard of hearing to educate professionals serving children and adults with hearing loss and their families. NOTE: This ebook has 200+ embedded videos which could make it slower to download and open than a text-only ebook.

What works in early reading materials

RTI Press Access to books is key to learning to read and sustaining a love of reading. Yet many low- and middle-income countries struggle to provide their students with reading materials of sufficient quality and quantity. Since 2008, RTI International has provided technical assistance in early reading assessment and instruction to ministries of education in dozens of low- and middle-income countries. The central objective of many of these programs has been to improve learning outcomes—in particular, reading—for students in the early grades of primary school. Under these programs, RTI has partnered with ministry staff to produce and distribute evidence-based instructional materials at a regional or national scale, in quantities that increase the likelihood that children will have ample opportunities to practice reading skills, and at a cost that can be sustained in the long term by the education system. In this paper, we seek to capture the practices RTI has developed and refined over the last decade, particularly in response to the challenges inherent in contexts with high linguistic diversity and low operational capacity for producing and distributing instructional materials. These practices constitute our approach to developing and producing instructional materials for early grade literacy. We also touch upon effective planning for printing and distribution procurement, but we do not consider the printing and distribution processes in depth in this paper. We expect this volume will be useful for donors, policymakers, and practitioners interested in improving access to cost-effective, high-quality teaching and learning materials for the early grades.

The importance of teaching

The Stationery Office England's school system performs below its potential and can improve significantly. This white paper outlines action designed to: tackle the weaknesses in the system; strengthen the status of teachers and teaching; reinforce the standards set by the curriculum and qualifications; give schools back the freedom to determine their own development; make schools more accountable to parents, and help them to learn more quickly and systematically from good practice elsewhere; narrow the gap in attainment between rich and poor. The quality of teachers and teaching is the most important factor in determining how well children do. The Government will continue to raise the quality of new entrants to the profession, reform initial teacher training, develop a network of "teaching schools" to lead training and development, and reduce the bureaucratic burden on schools. Teachers will be given more powers to control bad behaviour. The National Curriculum will be reviewed, specifying a tighter model of knowledge of core subjects so that the Curriculum becomes a benchmark against which school can be judged. Schools will be given more freedom and autonomy, the Academies programme extended and parents will be able to set up "Free Schools" to meet parent demand. Accountability for pupil performance is critical, and much more information will be available to aid understanding of a school's performance. School improvement will be the responsibility of schools, not central government. Funding of schools needs to be fairer and more transparent, and there will be a Pupil Premium to target resources on the most deprived pupils.

Early Years Placements

A Critical Guide to Outstanding Work-based Learning

Critical Publishing This is a key text for all those undertaking placements or work-based learning (WBL) in early years settings. Taking a practical approach underpinned by theory and research, it guides student practitioners through their WBL to help them achieve an outstanding experience. There is a focus on the variety of child, parent and practitioner perspectives plus case studies involving the full range of ages from across the early years. While it is invaluable in answering key questions about placements it also encourages a reflective and critical approach throughout that develops and promotes professionalism. It is completely up to date with the latest Early Years Foundation Stage and includes reference to the Early Years Teachers' Standards.

Reading

Multiple Perspectives

Taylor & Francis The field of reading is a compelling one, characterised by many debates and discussions. It is also amenable to investigations through a range of theories and research studies. In this book, eight leading authorities provide a 'state-of-the-art' overview of reading, using perspectives that have informed their work. There are overviews from linguistic, psychological, sociological and literary viewpoints, as well as more hybrid ones from investigations of digital literacy and multi-modality. This book celebrates what has already been achieved by bridging research, scholarship and practice; it also suggests what still needs to be done to bring the positive rewards from reading to greater numbers of young people. It also recognises that the benefits of reading extend beyond the personal. Accomplished reading skills empower people to meet the challenges of everyday life: making decisions, solving problems, and dealing with unexpected events. The need to refresh and renew our knowledge of reading has gained further impetus in the 'information age'. New technologies for information and communication continually appear: manifestations of 'fake news', disinformation and conspiracy theories spread rapidly across the globe. The book underlines the importance not only of reading, but also the fact that reading between and beyond the lines is more important than ever, in print and across multiple media platforms. The chapters in this book were originally published as a special issue of Education 3-13: International Journal of Primary, Elementary and Early Years Education.

Teaching Adult English Language Learners

A Practical Introduction

Modelling Under Risk and Uncertainty

An Introduction to Statistical, Phenomenological and Computational Methods

John Wiley & Sons Modelling has permeated virtually all areas of industrial, environmental, economic, bio-medical or civil engineering: yet the use of models for decision-making raises a number of issues to which this book is dedicated: How uncertain is my model? Is it truly valuable to support decision-making? What kind of decision can be truly supported and how can I handle residual uncertainty? How much refined should the mathematical description be, given the true data limitations? Could the uncertainty be reduced through more data, increased modeling investment or computational budget? Should it be reduced now or later? How robust is the analysis or the computational methods involved? Should / could those methods be more robust? Does it make sense to handle uncertainty, risk, lack of knowledge, variability or errors altogether? How reasonable is the choice of probabilistic modeling for rare events? How rare are the events to be considered? How far does it make sense to handle extreme events and elaborate confidence figures? Can I take advantage of expert / phenomenological knowledge to tighten the probabilistic figures? Are there connex domains that could provide models or inspiration for my problem? Written by a leader at the crossroads of industry, academia and engineering, and based on decades of multi-disciplinary field experience, Modelling Under Risk and Uncertainty gives a self-consistent introduction to the methods involved by any type of modeling development acknowledging the inevitable uncertainty and associated risks. It goes beyond the "black-box" view that some analysts, modelers, risk experts or statisticians develop on the underlying phenomenology of the environmental or industrial processes, without valuing enough their physical properties and inner modelling potential nor challenging the practical plausibility of mathematical hypotheses; conversely it is also to attract environmental or engineering modellers to better handle model confidence issues through finer statistical and risk analysis material taking advantage of advanced scientific computing, to face new regulations departing from deterministic design or support robust decision-making. Modelling Under Risk and Uncertainty: Addresses a concern of growing interest for large

industries, environmentalists or analysts: robust modeling for decision-making in complex systems. Gives new insights into the peculiar mathematical and computational challenges generated by recent industrial safety or environmental control analysis for rare events. Implements decision theory choices differentiating or aggregating the dimensions of risk/aleatory and epistemic uncertainty through a consistent multi-disciplinary set of statistical estimation, physical modelling, robust computation and risk analysis. Provides an original review of the advanced inverse probabilistic approaches for model identification, calibration or data assimilation, key to digest fast-growing multi-physical data acquisition. Illustrated with one favourite pedagogical example crossing natural risk, engineering and economics, developed throughout the book to facilitate the reading and understanding. Supports Master/PhD-level course as well as advanced tutorials for professional training Analysts and researchers in numerical modeling, applied statistics, scientific computing, reliability, advanced engineering, natural risk or environmental science will benefit from this book.

Principles of Effective Literacy Instruction, Grades K-5

Guilford Publications What are the principles that every elementary teacher must learn in order to plan and adapt successful literacy instruction? This concise course text and practitioner resource brings together leading experts to explain the guiding ideas that underlie effective instructional practice. Each chapter reviews one or more key principles and highlights ways to apply them flexibly in diverse classrooms and across grade levels and content areas. Chapters cover core instructional topics (phonemic awareness, phonics, fluency, vocabulary, and comprehension); high-quality learning environments; major issues such as assessment, differentiation, explicit instruction, equity, and culturally relevant pedagogy; and the importance of teachers' reflective practice and lifelong learning.
