Comparing Different Strategies to Establishing Self-Driving Cars GRIN Verlag Seminar paper from the year 2016 in the subject Business economics - Supply, Production, Logistics, grade: 1,7, University of Münster (Institut für Genossenschaftswesen), course: Unternehmenskooperation, language: English, abstract: Self-driving cars are highly topical and much research is done in this field by leading international technology companies and car manufacturers. Google and Apple are both likely to launch a self-driving car in a few years and compete in being the first to develop the required technology. This paper reveals two entirely different strategies to establish self-driving cars by comparing the two technology giants' way of bringing a car into the market. The technology required for driverless cars includes a computer software specifically developed for self-driving, sensors consisting of lasers, radars and cameras to identify objects in all directions, electric batteries, back-up systems taking over the driver's tasks and a car shape that does not interfere with the sensors' field of view. There is still much research to be done in this field, but it is quite sure that driverless cars will work in a few years. For this purpose, the firms' resources are analysed with the help of the resource-based view. Then, this paper derives the different company strategies and applies them to the self-driving car projects of Google and Apple. January 1, 1922 Correlation between Corporate Culture and Corporate Strategy Google vs. Apple and Daimler vs. Siemens GRIN Verlag Seminar paper from the year 2013 in the subject Business economics - Business Management, Corporate Governance, grade: 1,7, University of applied sciences, Cologne, course: Strategic Corporate Management, language: English, abstract: The character of a company's culture or work climate is gaining in importance. Culture is a product of the core values and business principles that executives espouse, the standards of what is ethically acceptable and what is not, the work practices and behaviours that define "how we do things around here", its approach to people management and style of operating, the "chemistry" and the "personality" that permeates its work environment, and the stories that get told over and over to illustrate and reinforce the company's values, business principles, and traditions. A company's culture is important because it influences the organization's actions and approaches to conduct the business - in a very real sense, the culture is the company's "operating system" or organizational DNA. All in all, culture as a concept is difficult to define and differs from company to company. The crafting of a strategy represents a managerial commitment to pursue a particular set of actions in growing the business, attracting and pleasing customers, competing successfully, conducting operations, and improving the company's financial and market performance. Even companies with same strategic and business concepts and comparable success differ in their approaches regarding the corporate culture. What becomes clear is that there is a correlation between culture and strategy. Hence the consistency between strategy and culture is a long-term competitive advantage and a key to corporate success. To counteract preventive a possible misfit between the corporate culture and the strategy, consideration of corporate culture as part of the concept to strategy implementation is essential.
