GRADUATE STUDY IN PSYCHOLOGY

YOUR GUIDE TO SUCCESS

Charles C Thomas Publisher In Graduate Study in Psychology: Your Guide to Success author Tara Kuther takes the reader step-by-step through the graduate admissions process. She begins with posing the question of whether graduate school is right for everyone and the differences between pursuing a master's degree or a doctoral degree. The following chapters contain information regarding what graduate school is like, how to evaluate and choose the right graduate program for you, and what graduate schools are looking for in an applicant. Kuther also addresses how to improve an applicant's chances of getting selected for graduate school by improving credentials and obtaining research and applied experience during college. This book offers advice on how to seek financial aid to fund graduate education and a timetable for complying with admission application requirements. There are chapters that detail how to study for the Graduate Record Exam, how to write an admissions essay, how to prepare for interviews, and how to ask for letters of recommendation. Each chapter concludes with tips from graduate students about each challenge encountered. Graduate Study in Psychology closes with an appendix of resources and recommended readings and websites to help the reader at each stage of choosing, applying to, and succeeding in graduate school.

ALL YOUR WORD PROBLEMS SOLVED

CRUSHING STANDARDIZED TEST MATH FOR THE GMAT, GRE, SAT, PSAT/NMSQT, AND ACT

Word Problems. Does even thinking about solving word problems in math make you feel tense, anxious, confused, or frustrated? You're not alone. Most high school students - even ones who excel in their math classes - find word problems on the PSAT/NMSQT, SAT, and ACT tough to solve consistently and efficiently. Adult students preparing for the GMAT or GRE find word problems just as daunting as these were in high school. Most major publishers only briefly explain word problems and demonstrate simple examples in their study guides, but challenge students with very difficult practice problems. Even students in their test prep courses remain confused and lacking in confidence about how to approach word problems. All Your Word Problems Solved serves as an invaluable supplement to whichever test-specific study guide you prefer. This book will help you learn to systematically decode math word problems, set up the correct equations, organize your scratch work to "error-proof" yourself, and efficiently arrive at the right answer, every time. The strategies, approaches, techniques, and tips found in this book have been created and tested with students aged 15 to 40+ preparing for the most common standardized college and graduate admissions tests, including the GMAT, GRE, SAT, PSAT/NMSQT and ACT. In this book, you will learn a set of structured-but-flexible approaches which can be combined in different ways to solve even the hardest questions on your standardized tests. What makes this book so valuable? In the words of a GMAT student: "Clear explanation of how to organize your work and make sense of what you are actually solving for." Presentation of information is designed to accelerate your learning and improve your retention of facts, relationships, and formulas. Sample problems which demonstrate key methods progress in difficulty, so there is no huge jump between the examples and problems in the Official Guide. Refresher content and variety of examples for word problems related to concepts in Algebra 1, Algebra 2 and Geometry. You'll find out how to recognize, approach, and solve word problems of many types: linear equations, exponential growth, ratios, proportions, age problems, work-rate, distance-rate, systems of equations, mixtures, dilutions, interest, profit, percent change, complex geometric figures, probability, permutations & combinations, weighted averages, sequences, patterns, functions and symbol problems.

PLAYING THE GAME

THE STREETSMART GUIDE TO GRADUATE SCHOOL

iUniverse "This book is lewd, rude and superb! Frank and Stein have written the first guide to grad school from a student's point of view; and the result is an irreverent, humorous and USEFUL book of advice. These foul-mouthed sages will help you get through a master's or doctoral program more quickly, with fewer blunders and less angst. I plan to recommend this book to all the graduate students I coach and teach." -Mary McKinney, Ph.D. Clinical Psychologist and Dissertation Coach <http://www.successfulacademic.com> Yes, sports fans!, er, grad school fans Bad boys Fred and Karl are back with an updated version of their best selling self-help guide for grad students. This New and/or Improved Version is stocked with additional content, more lame attempts at humor, and a lower price (Karl threatened to moon the publisher unless his demands were met). Written with the attitude of a couple ill-mannered schoolboys who exhibit the insight and genius of the Ph.D.'s who wrote it, *Playing the Game* simplifies even the most complex aspects of grad school. Authors Frank and Stein have broken down *Playing the Game* into three hilarious and straightforward sections: Getting In, Getting Through, and Getting the Hell Out. In whatever stage of graduate school you find yourself, rest assured that you will never again grumble, "If only I had known! If only someone had explained this @%#! to me sooner!" *Playing the Game* simplifies the entire graduate school experience while imparting comically relevant stories and translating complicated graduate school jargon. This self-help guide helps grad students to comprehensively navigate their graduate school journey from application to matriculation. Unlike most of the material you'll be reading in grad school, *Playing the Game* is actually intelligible. www.playing-the-game.com

MENTAL MATH

TRICKS TO BECOME A HUMAN CALCULATOR

You don't have to buy this book. Just read this till the end You don't have to buy this book. Just read this till end & you will learn something that will change the way you do math forever. Warning: I am revealing this secret only to the first set of readers who will buy this book & plan to put this secret back inside the book once I have enough sales. So read this until the very end while you still can. School taught you the wrong way to do math The way you were taught to do math, uses a lot of working memory. Working memory is the short term memory used to complete a mental task. You struggle because trying to do mental math the way you were taught in school, overloads your working memory. Let me show you what I mean with an example: Try to multiply the 73201×3 . To do this you multiply the following: $1 \times 3 = 0$, $0 \times 3 = 2$, $2 \times 3 = 3$, $3 \times 3 = 7$, $7 \times 3 = 21$. This wasn't hard, & it might have taken you just seconds to multiply the individual numbers. However, to get the final answer, you need to remember every single digit you calculated to put them back together. It takes effort to get the answer because you spend time trying to recall the numbers you already calculated. Math would be easier to do in your head if you didn't have to remember so many numbers. Imagine when you tried to multiply 73201×3 , if you could have come up with the answer, in the time it took you to multiply the individual numbers. Wouldn't you have solved the problem faster than the time it would have taken you to punch in the numbers inside a calculator? Do the opposite of what you were taught in school! The secret of doing mental math is to calculate from left to right instead of from right to left. This is the opposite of what you were taught in school. This works so well because it frees your working memory almost completely. It is called the LR Method where LR stands for Left to Right. Lets try to do the earlier example where we multiplied 73201×3 . This time multiply from left to right, so we get: $7 \times 3 = 21$, $3 \times 3 = 9$, $2 \times 3 = 6$, $0 \times 3 = 0$, $1 \times 3 = 3$. Notice that you started to call out the answer before you even finished the whole multiplication problem. You don't have to remember a thing to recall & use later. So you end up doing math a lot faster. The Smart Choice You could use what you learnt & apply it to solve math in the future. This might not be easy, because we just scratched the surface. I've already done the work for you. Why try to reinvent the wheel, when there is already a proven & tested system you can immediately apply. This book was first available in video format & has helped 10,000+ students from 132 countries. It is available at ofpad.com/mathcourse to enroll. This book was written to reach students who consume the information in text format. You can use the simple techniques in this book to do math faster than a calculator effortlessly in your head, even if you have no aptitude for math to begin with. Imagine waking up tomorrow being able to do lightning fast math in your head. Your family & friends will look at you like you are some kind of a genius. Since calculations are done in your head, you will acquire better mental habits in the process. So you will not just look like a genius. You will actually be one. Limited Time Bonus Weekly training delivered through email is available for free as a bonus at the end of this book for the first set of readers.
