Human - Space - Machine Stage Experiments at the Bauhaus Edition Bauhaus 38 In 1921, Walter Gropius founded a theater workshop at the Bauhaus. It conducted new research and experiments on the relationship between humans and technology. The central protagonists Lothar Schreyer, Oskar Schlemmer, and László Moholy-Nagy investigated the issues of mechanization, machine industrialization, and rationalization. They sought a new, meaningful relationship with the dynamized, increasingly technically animated environment. In their stage laboratory, they developed abstract motion studies, designed atmosphere machines, and built theater apparatus. They also organized the famous Bauhaus celebrations, where they staged themselves as a collective of new humans. For the first time, an exhibition and a catalog with sketches, drawings, photographs as well as films, figurines, costumes, models, and apparatus are now devoted to the experiments and concepts of the legendary Bauhaus stage. **Curating and the Educational Turn** In recent years, there has been increased debate about the incorporation of pedagogy into art and curatorial practice-about what has been termed the 'educational turn'. In this companion volume to the critically acclaimed *Curating Subjects*, artists, curators, critics and academics respond to this widely recognised sense of art's paradigmatic re-orientation towards the educational. Consisting primarily of newly commissioned texts, from interviews and position statements to performative texts and dialogues, *Curating and the Educational Turn* also includes a small number of previously published writings that have proved pivotal in the debate so far This anthology presents an essential enquiry for anyone interested in the cultural politics of production at the intersections of art teaching and learning *Curating and the Educational Turn* is indispensable reading for anyone interested in curating, art practice and pedagogy as creative, engaged and potentially transformative activities. This timely and important collection provides a forum for what has been described as the 'educational turn' in curating and its more broad-based manifestations in art, education and culture. **Curating Subjects** Edited by Paul O'Neill. Reward Elementary. Student's book The Role of Mathematics in Physical Sciences Interdisciplinary and Philosophical Aspects Springer Science & Business Media Even though mathematics and physics have been related for centuries and this relation appears to be unproblematic, there are many questions still open: Is mathematics really necessary for physics, or could physics exist without mathematics? Should we think physically and then add the mathematics apt to formalise our physical intuition, or should we think mathematically and then interpret physically the obtained results? Do we get mathematical objects by abstraction from real objects, or vice versa? Why is mathematics effective into physics? These are all relevant questions, whose answers are necessary to fully understand the status of physics, particularly of contemporary physics. The aim of this book is to offer plausible answers to such questions through both historical analyses of relevant cases, and philosophical analyses of the relations between mathematics and physics.

The Teaching Hospital: Brigham and Women's Hospital and the Evolution of Academic Medicine McGraw Hill Professional CELEBRATING THE HISTORY OF AMERICA'S LANDMARK INSTITUTION The fascinating true story of Brigham and Women's Hospital Founded in 1913, the Peter Bent

Brigham Hospital was the first medical institution since John Hopkins to foster clinical clerkships of medical students in the environment of a modern residency program. Forging a partnership with Harvard Medical School, the Brigham would become a major innovator in clinical research, implementing a new educational model that would inspire other hospitals for generations to come. In 1980 the Brigham merged with two other Boston medical institutions boasting their own profoundly important histories, the Boston Hospital for Women and the Robert Breck Brigham Hospital, to become Brigham and Women's Hospital (BWH). This rich and insightful account brings this remarkable story to life: the milestone achievements, medical breakthroughs, and personal dedication that have made BWH a world-class leader in academic medicine. The Teaching Hospital includes: A comprehensive history of BWH, from its continued commitment to medicine, education, and compassionate care to its ongoing leadership in transforming science-driven healthcare today. A compendium of BWH's famous firsts, including the nation's first maternity ward, the first in-vitro fertilization, the first successful human organ transplant, New England's first coronary care unit, and most recently, the first full-face transplant, as well as cutting-edge research in stem cells, systems biology, and bioengineering. A celebration of Brigham's luminaries and landmarks, from pioneers like Dr. Harvey Cushing, the father of modern neurosurgery, Dr. Bernard Lown, Nobel Peace Prize winning cardiologist, and Paul Farmer, co-founder of Partners in Health, to the hospital's milestone breakthroughs in radiology, arthritis, transplant surgery, immunology, women's health, community health, and more. With invaluable contributions from medical historians and doctors, this essential volume provides an in-depth history of the institution. Here is the evolution of BWH in all its dimensions: its reputation as an education and clinical innovator, its role in fostering groundbreaking biomedical research, its ties to the local community as well as to the nation and the world, its financial and administrative growth across the decades, the personalities who have made BWH famous, and the fascinating inner life of the hospital. Filled with stories of profound commitment, critical analysis, and behind-the-scenes details, the book celebrates the Brigham's history in both a medical and cultural context.
