THE HUMANISTIC TRADITION

WORLD PREHISTORY

A BRIEF INTRODUCTION

Routledge For one semester or quarter courses in World Prehistory. Written by one of the leading archaeological writers in the world — in a simple, jargon-free narrative style — this brief, well-illustrated account of the major developments in the human past makes world prehistory uniquely accessible to complete beginners. Written by Brian Fagan, World Prehistory covers the entire world, not just the Americas or Europe, and places major emphasis on both theories and the latest archaeological and multidisciplinary approaches. His focus is on four major developments in world prehistory: 1) The origins of humanity. 2) The appearance and spread of modern humans before and during the late Ice Age- including the first settlement of the Americas. 3) The beginnings of food production. 4) The rise of the first civilizations.

Cambridge University Press

THE HUMANISTIC TRADITION VOLUME I: PREHISTORY TO THE EARLY MODERN WORLD

McGraw-Hill Education Interdisciplinary in approach and topical in focus, the sixth edition of *The Humanistic Tradition* continues to bring to life humankind's creative legacy. With more than 800 illustrations and some 150 literary sources in accessible translations, this widely acclaimed humanities survey takes a global perspective that is at once selective and engaging, and helps students better understand the relationship between world cultures. Available in multiple formats, *The Humanistic Tradition* examines the political, economic, and social contexts out of which history's most memorable achievements emerged.

SIMULATING PREHISTORIC AND ANCIENT WORLDS

Springer This book presents a unique selection of fully reviewed, extended papers originally presented at the Social Simulation Conference 2014 in Barcelona, Spain. Only papers on the simulation of historical processes have been selected, the aim being to present theories and methods of computer simulation that can be relevant to understanding the past. Applications range from the Paleolithic and the origins of social life up to the Roman Empire and Early Modern societies. Case studies from Europe, America, Africa and Asia have been selected for publication. The extensive introduction offers a thorough review of the computer simulation of social dynamics in past societies as a means of understanding human history. This book will be of great interest to researchers in the social sciences, archaeology, evolutionary anthropology, and social history.

MAKING ONE'S WAY IN THE WORLD

THE FOOTPRINTS AND TRACKWAYS OF PREHISTORIC PEOPLE

Oxbow Books The book draws on the evidence of landscape archaeology, palaeoenvironmental studies, ethnohistory and animal tracking to address the neglected topic of how we identify and interpret past patterns of movement in the landscape. It challenges the pessimism of previous generations which regarded prehistoric routes such as hollow ways as generally undatable. The premise is that archaeologists tend to focus on 'sites' while neglecting the patterns of habitual movement that made them part of living landscapes. Evidence of past movement is considered in a multi-scalar way from the individual footprint to the long distance path including the traces created in vegetation by animal and human movement. It is argued that routes may be perpetuated over long timescales creating landscape structures which influence the activities of subsequent generations. In other instances radical changes of axes of communication and landscape structures provide evidence of upheaval and social change. Palaeoenvironmental and ethnohistorical evidence from the American North West coast sets the scene with evidence for the effects of burning, animal movement, faeces deposition and translocation which can create readable routes along which are favoured resources. Evidence from European hunter-gatherer sites hints at similar practices of niche construction on a range of spatial scales. On a local scale, footprints help to establish axes of movement, the locations of lost settlements and activity areas. Wood trackways likewise provide evidence of favoured patterns of movement and past settlement location. Among early farming communities alignments of burial mounds, enclosure entrances and other monuments indicate axes of communication. From the middle Bronze Age in Europe there is more clearly defined evidence of trackways flanked by ditches and fields. Landscape scale survey and excavation enables the dating of trackways using spatial relationships with dated features and many examples indicate long-term continuity of routeways. Where fields flank routeways a range of methods, including scientific approaches, provide dates. Prehistorians have often assumed that Ridgeways provided the main axes of early movement but there is little evidence for their early origins and rather better evidence for early routes crossing topography and providing connections between different environmental zones. The book concludes with a case study of the Weald of South East England which demonstrates that some axes of cross topographic movement used as droveways, and generally considered as early medieval, can be shown to be of prehistoric origin. One reason that dryland routes have proved difficult to recognise is that insufficient attention has been paid to the parts played by riverine and maritime longer distance communication. It is argued that understanding the origins of the paths we use today contributes to appreciation of the distinctive qualities of landscapes. Appreciation will help to bring about effective strategies for conservation of mutual benefit to people and wildlife by maintaining and enhancing corridors of connectivity between different landscape zones including fragmented nature reserves and valued places. In these ways an understanding of past routeways can contribute to sustainable landscapes, communities and quality of life

WORLD PREHISTORY AND ARCHAEOLOGY

*Routledge An integrated picture of prehistory as an active process of discovery. World Prehistory and Archaeology: Pathways through Time, third edition, provides an integrated discussion of world prehistory and archaeological methods. This text emphasizes the relevance of how we know and what we know about our human prehistory. A cornerstone of World Prehistory and Archaeology is the discussion of prehistory as an active process of discovery. Methodological issues are addressed throughout the text to engage readers. Archaeological methods are introduced in the first two chapters. Succeeding chapters then address the question of how we know the past to provide an integrated presentation of prehistory. The third edition involves readers in the current state of archaeological research, revealing how archaeologists work and interpret what they find. Through the coverage of various new research, author Michael Chazan shows how archaeology is truly a global discipline. Learning Goals Upon completing this book, readers will be able to: * Gain new perspectives and insights into who we are and how our world came into being. * Think about humanity from the perspective of archaeology. * Appreciate the importance of the archaeological record for understanding contemporary society.*

POPULATION DYNAMICS IN PREHISTORY AND EARLY HISTORY

NEW APPROACHES USING STABLE ISOTOPES AND GENETICS

Walter de Gruyter Migrations and population dynamics are considered very problematic topics in the fields of ancient studies. Recent scholarship in (pre)historical population has generated new impulses by using scientific approaches using radiogenic and stable isotopes, and palaeogenetics, as well as computer simulation. As a result, the state of migration research has undergone rapid change. Several research groups presented papers at a conference held in Berlin in 2010, addressing specific historical aspects of population dynamics and migration, with no chronological or geographical restrictions, in the light of cutting-edge bio-archaeological research. This volume, divided into three larger thematic sections (isotope analysis, population genetics, and modelling and computer simulation), presents experiences and insights about methodological approaches, research results and prospects for future research in this area in a varied collection of papers. Scholars from widely diverse scientific disciplines present their approaches, findings and interpretations to an audience far broader than the circles of the individual disciplines.

PREHISTORIC ARCHAEOLOGY ON THE CONTINENTAL SHELF

A GLOBAL REVIEW

Springer The chapters in this edited volume present multi-disciplinary case studies of prehistoric archaeological sites located on now-submerged portions of the continental shelf. Each chapter represents an extension of the known prehistoric record beyond the modern shoreline. Case studies represent central themes of landscape change, climate change and societal development, using new technologies for mapping, monitoring and managing these sites.

WHEN THE WORLD WAS BLACK PART ONE

THE UNTOLD HISTORY OF THE WORLD'S FIRST CIVILIZATIONS PREHISTORIC CULTURE

Supreme Design Publishing When the World Was Black: The Untold History of the World's First Civilizations (Volume Two of The Science of Self series) has been published in TWO parts. Why two? Because there are far too many stories that remain untold. We had over 200,000 years of Black history to tell - from the southern tip of Chile to the northernmost isles of Europe - and you can't do that justice in a 300-page book. So there are two parts, each consisting of 360 pages of groundbreaking history, digging deep into the story of all the world's original people. Part One covers the Black origins of all the

world's oldest cultures and societies, spanning more than 200,000 years of human history. Part Two tells the stories of the Black men and women who introduced urban civilization to the world over the last 20,000 years, up to the time of European contact. Each part has over 100 helpful maps, graphs, and photos, an 8-page full-color insert in the center, and over 300 footnotes and references for further research. "In this book, you'll learn about the history of Black people. I don't mean the history you learned in school, which most likely began with slavery and ended with the Civil Rights Movement. I'm talking about Black history BEFORE that. Long before that. In this book, we'll cover over 200,000 years of Black history. For many of us, that sounds strange. We can't even imagine what the Black past was like before the slave trade, much less imagine that such a history goes back 200,000 years or more." "Part Two covers history from 20,000 years ago to the point of European contact. This is the time that prehistoric cultures grew into ancient urban civilizations, a transition known to historians as the "Neolithic Revolution."

WORLD HISTORY MODERN ERA

BAN CHIANG, A PREHISTORIC VILLAGE SITE IN NORTHEAST THAILAND, VOLUME 1

THE HUMAN SKELETAL REMAINS

UPenn Museum of Archaeology The inaugural volume in the Thai Archaeology Monograph Series describes in detail the human skeletal remains from Ban Chiang in northeast Thailand. The skeletal material spans a period from 2100 B.C. to A.D. 200 and includes premetal, Bronze Age, and Iron Age deposits from a series of prehistoric societies. The history of Homo sapiens in Asia has long been a topic of interest among scholars investigating human biology. This study, which is based on one of the larger, comprehensively analyzed skeletal series ever excavated in the region, makes fundamental contributions to understanding human settlement in eastern Asia. The volume includes detailed summaries of metric and nonmetric variation recorded in teeth, skulls, and the rest of the skeleton, and evidence of disease of the Ban Chiang people. These data are used to examine a number of questions: Where did the people of Ban Chiang come from? Did more intensified agriculture influence the health of the people? How do the people of Ban Chiang compare to the inhabitants of other ancient sites in Thailand and to the modern peoples of Thailand and neighboring regions? Contrary to other groups experiencing similar transitions elsewhere in the world, no clear evidence for a decline in health over time is noted in the Ban Chiang skeletal series, suggesting continuity in a broad-based subsistence strategy even in the face of intensifying agriculture. The skeletal evidence further suggests a rigorous physical lifestyle with little evidence for infectious disease or interpersonal violence. BUILDING THE MODERN WORLD

WORLD HISTORY ENCYCLOPEDIA

ABC-CLIO An unprecedented undertaking by academics reflecting an extraordinary vision of world history, this landmark multivolume encyclopedia focuses on specific themes of human development across cultures era by era, providing the most in-depth, expansive presentation available of the development of humanity from a global perspective. Well-known and widely respected historians worked together to create and guide the project in order to offer the most up-to-date visions available. * Contributions by a team of over 800 historians, anthropologists, sociologists, and other academics, focused on a world-based view of history, including well-known researchers as well as innovative newcomers who have made remarkable contributions. This multi-faceted approach offers a work that combines orthodox views with creative new perspectives * Twenty-one volumes covering the breadth of human history, in nine eras: Beginnings of Human Society; Early Civilizations, 4000-1000 BCE; Classical Traditions, 1000 BCE-300 CE; Expanding Regional Civilizations, 300-1000; Intensified Hemispheric Interactions, 1000-1500; The First Global Age, 1450-1770; The Age of Revolutions, 1750-1914; Crisis and Achievement, 1900-1945; Promises and Paradoxes, 1945-Present * General chronologies plotting large-scale changes in human organization, in areas such as population flow, technological development, and the evolution of social and political institutions * Hundreds of images and maps, plus charts and bibliographies * A wide range of primary source excerpts (some translated into English for the first time) giving students firsthand exposure to the raw materials of historical research

ONE HEALTH

PEOPLE, ANIMALS, AND THE ENVIRONMENT

ASM Press Emerging infectious diseases are often due to environmental disruption, which exposes microbes to a different niche that selects for new virulence traits and facilitates transmission between animals and humans. Thus, health of humans also depends upon health of animals and the environment - a concept called One Health. This book presents core concepts, compelling evidence, successful applications, and remaining challenges of One Health approaches to thwarting the threat of emerging infectious disease. Written by scientists working in the field, this book will provide a series of

""stories"" about how disruption of the environment and transmission from animal hosts is responsible for emerging human and animal diseases. • Explains the concept of One Health and the history of the One Health paradigm shift . • Traces the emergence of devastating new diseases in both animals and humans. • Presents case histories of notable, new zoonoses, including West Nile virus, hantavirus, Lyme disease, SARS, and salmonella. • Links several epidemic zoonoses with the environmental factors that promote them. • Offers insight into the mechanisms of microbial evolution toward pathogenicity. • Discusses the many causes behind the emergence of antibiotic resistance. • Presents new technologies and approaches for public health disease surveillance. • Offers political and bureaucratic strategies for promoting the global acceptance of One Health.

EUROPEAN PREHISTORY

A SURVEY

Springer Science & Business Media Sarunas Milisauskas· 1.1 INTRODUCTION The purpose of this book is four-fold: to introduce English-speaking students and scholars to some of the outstanding archaeological research that has been done in Europe in recent years; to integrate this research into an anthropological frame of reference; to address episodes of culture change such as the transition to farming; the origin of complex societies, and the origin of urbanism, and to provide an overview of European prehistory from the earliest appearance of humans to the rise of the Roman empire. In 1978, the Academic Press published my book *European Prehistory* which, typically for that period, emphasized cultural evolution, culture process, technology, environment, and economy. To produce a new version and an up- to-date prehistory of Europe, I have invited contributions from specialists in the Palaeolithic, Mesolithic, Bronze and Iron Ages. Thus while this version of *European Prehistory* is a new book, however, it still incorporates some data from the 1978 version, particularly in *The Present Environment* and *Neolithic* chapters. Like its predecessor, this edition is structured around selected general topics, such as technology, trade, settlement, warfare, and ritual.

THE LOST CIVILIZATIONS OF THE STONE AGE

Simon and Schuster A British scholar challenges the conventional view of the Stone Age as minimally civilized, pointing out the many advances of its peoples, from their maps of the constellations to their innovations in boat building.

CONTACT AND EXCHANGE IN THE ANCIENT WORLD

University of Hawaii Press Do civilizations independently invent themselves or are they the result of cultural diffusion? The contributors to this volume do not attempt to provide a definitive answer to this contentious question, one of the most debated issues of the past century. Instead, they shift the focus from theory to reality by presenting empirical evidence on a wide range of cultural phenomena in history and prehistory, thereby demonstrating the processes whereby cultural traits are acquired and modified—the dynamics of transmission and transformation. The range of topics covered in this volume is of extraordinary breadth: the distribution of belt hooks and belts from the steppes to North and Central China; textile exchange in the third millennium B.C.; the spread of bronze metallurgy across Asia; the adaptation of complicated technologies by distant peoples; the mechanisms whereby bronze implements were used to convey political messages in East Asia; the ethnogenesis of the Turks; the complex interrelationships among migratory and settled peoples in western Central Asia during the Bronze Age; the origins of the enigmatic Chinese goddess known as Queen Mother of the West; an account of hunting with trained cheetahs; and the use of abundant botanical and zoological evidence to affirm that the Old World and the New World must have been in contact long before the fifteenth century. Rounding out the volume is a survey of the problem of modernocentrism.

FOSSILS & PREHISTORIC LIFE (ENHANCED EBOOK)

Lorenz Educational Press The material in this book focuses on the historical development of life as evidenced by fossil specimens. The significance of fossils in interpreting our geologic history is described. Each of the twelve teaching units in this book is introduced by a color transparency (print books) or PowerPoint slide (eBooks) that emphasizes the basic concept of the unit and presents questions for discussion. Reproducible student pages provide reinforcement and follow-up activities. The teaching guide offers descriptions of the basic concepts to be presented, background information, suggestions for enrichment activities, and a complete answer key.

THE PREHISTORY OF BRITAIN AND IRELAND

Cambridge University Press Sited at the furthest limits of the Neolithic revolution and standing at the confluence of the two great sea routes of prehistory, Britain and Ireland are distinct from continental Europe for much of the prehistoric sequence. In this landmark 2007 study - the first significant survey of the archaeology of Britain and Ireland for twenty years - Richard Bradley offers an interpretation of the unique archaeological record of these islands based on a wealth of current and largely unpublished data. Bradley surveys the entire archaeological sequence over a 4,000 year period, from the adoption of agriculture in the Neolithic period to the discovery of Britain and Ireland by travellers from the Mediterranean during the later pre-Roman Iron Age. Significantly, this is the first modern account to treat Britain and Ireland on equal terms, offering a detailed interpretation of the prehistory of both islands.

THE PEARSON GENERAL STUDIES MANUAL 2009, 1/E

Pearson Education India This latest edition of The Pearson General Studies Manual continues to provide exhaustive study material for the General Studies paper of the UPSC Civil Services Preliminary Examination. This student-friendly book has been completely revised, thoroughly updated and carefully streamlined and is strictly exam-centric. In this new edition, a large number of new boxes and marginalia "with additional and relevant information" have been added to provide cutting-edge information to the aspirant. Readers will find that important facts and information have been presented in the form of well-structured tables and lists.

THE CAMBRIDGE WORLD HISTORY: VOLUME 1, INTRODUCING WORLD HISTORY, TO 10,000 BCE

Cambridge University Press Volume 1 of the Cambridge World History is an introduction to both the discipline of world history and the earliest phases of world history up to 10,000 BCE. In Part I leading scholars outline the approaches, methods, and themes that have shaped and defined world history scholarship across the world and right up to the present day. Chapters examine the historiographical development of the field globally, periodisation, divergence and convergence, belief and knowledge, technology and innovation, family, gender, anthropology, migration, and fire. Part II surveys the vast Palaeolithic era, which laid the foundations for human history, concentrating on the most recent phases of hominin evolution, the rise of Homo sapiens and the very earliest human societies through to the end of the last ice age. Anthropologists, archaeologists, historical linguists and historians examine climate and tools, language, and culture, as well as offering regional perspectives from across the world.

HUMAN PALEONTOLOGY AND PREHISTORY

CONTRIBUTIONS IN HONOR OF YOEL RAK

*Springer The aim of the book is to present original and thought-provoking essays in human paleontology and prehistory, which are at the forefront of human evolutionary research, in honor of Professor Yoel Rak (a leading scholar in paleoanthropology). The volume presents a collection of original papers contributed by many of Yoel's friends and colleagues from all over the globe. Contributions from experts around the globe fall roughly into three broad categories: Reflections on some of the broad theoretical questions of evolution, and especially about human evolution; the early hominins, with special emphasis on *Australopithecus afarensis* and *Paranthropus*; and the Neanderthals, that contentious group of our closest extinct relatives. Within and across these categories, nearly every paper addresses combinations of methodological, analytical and theoretical questions that are pertinent to the whole human evolutionary time span. This book will appeal most to scholars and advanced students in paleoanthropology, human paleontology and prehistoric archaeology.*

CURRENT APPROACHES TO TELLS IN THE PREHISTORIC OLD WORLD

A CROSS-CULTURAL COMPARISON FROM EARLY NEOLITHIC TO THE IRON AGE

Oxbow Books Deeply stratified settlements are a distinctive site type featuring prominently in diverse later prehistoric landscapes of the Old World. Their massive materiality has attracted the curiosity of lay people and archaeologists alike. Nowadays a wide variety of archaeological projects are tracking the lifestyles and social practices that led to the building-up of such superimposed artificial hills. However, prehistoric tell-dwelling communities are too often approached from narrow local perspectives or discussed within strict time- and culture-specific debates. There is a great potential to learn from such ubiquitous archaeological manifestations as the physical outcome of cross-cutting dynamics and comparable underlying forces irrespective of time and space. This volume tackles tells and tell-like sites as a transversal phenomenon whose commonalities and divergences are poorly understood yet may benefit from cross-cultural comparison. Thus, the book intends to assemble a representative range of ongoing theory - and science -based fieldwork projects targeting this kind of sites. With the aim of encompassing a variety of social and material dynamics, the volume's scope is diachronic - from the Earliest Neolithic up to the Iron Age-, and covers a very large region, from Iberia in Western Europe to Syria in the Middle East. The core of the volume comprises a selection of the most remarkable contributions to the session with a similar title celebrated in the European Association of Archaeologists Annual Meeting held at Barcelona in 2018. In addition, the book includes invited chapters to round out underrepresented areas and periods in the EAA session with relevant research programmes in the Old World. To accomplish such a cross-cultural course, the book takes a case-based approach, with contributions disparate both in their theoretical foundations - from household archaeology, social agency and formation theory - and their research strategies - including geophysical survey, microarchaeology and high-resolution excavation and dating.
